

24 Listening Tests

Test No: 26

Extract 1: Questions 1-12

You hear a gastro-enterologist talking to a new patient called Simon Mortlake. For **questions 1-12**, complete the notes with a word or short phrase.

You now have 30 seconds to look at the notes.

Patient	Simon Mortlake
Patient history	• age 57 • referred with a suspected (1) _____(three years ago) - endoscopy - (2) _____ (clear) • successfully treated for (3) _____ (medically) • surgery for (4) _____ (two years ago) • occupation: retired (5)_____
Current symptoms	• indigestion – especially (6) _____ after meals • feels that he lacks (7) _____ • some (8) _____ on exertion • reports loss of (9) _____ • no (10) _____ to abdomen
Patient concerns	• family history: uncle had (11) _____ • planning a trip to (12) _____

Extract 2: Questions 13-24

You hear a vascular surgeon talking to a new patient called Monica Pattison. For **questions 13-24**, complete the notes with a word or short phrase.

You now have 30 seconds to look at the notes.

Patient Monica Pattison

Patient history and background

- varicose veins: first occurrence whilst **(13)** _____ (25 years ago)
- symptoms abated (after 18 months)
- worked as a **(14)** _____ in a restaurant
- symptoms recurred (four years ago)
 - calves described as **(15)** _____ and itchy

- Previous treatment**
- self-help: movement, keeping feet elevated, no **(16)** _____ of legs
 - exercise: moderate daily walk (thirty minutes)
 - GP: further self-help only. Patient advised to **(17)** _____

Recent symptoms and treatment

- oedema in **(18)** _____ (one year ago)
- inflammation of feet and ankles
- recurrent night **(19)** _____
- ultrasound scan excluded **(20)** _____
- treatment by injection of **(21)** _____ (local aesthetic, day patient)
- used bandages (one week) and **(22)** _____ (for a further week)
- side effects – severe **(23)** _____

- Patient concerns**
- worried about invasive surgery
 - also about the effect on her **(24)** _____ business

That is the end of Part A. Now look at Part B.

Part B

In this part of the test, you'll hear six different extracts. In each extract you'll hear people talking in a different healthcare setting.

For **questions 25-30**, choose the answer (**A**, **B** or **C**) which fits best according to what you hear. You'll have time to read each question before you listen. Complete your answers as you listen.

Now look at question 25.

- 25.** You hear a nurse in the obstetrics department talking to the obstetrician.

She's worried because the patient

- ☐ **A** is still unaware of her pregnancy.
- ☐ **B** has reacted badly to news of her pregnancy.
- ☐ **C** says she may want to terminate her pregnancy.

- 26.** You hear a senior doctor giving a group of medical students training in how to conduct a physical examination.

He says that during the examination of a patient's shoulder, the doctor should

- ☐ **A** keep an open mind about what problems there might be.
- ☐ **B** perform specific tests suggested by the patient history.
- ☐ **C** be ready to help the patient remove any clothing.

- 27.** You hear a GP talking to a patient about his mother.

What is he seeking advice about?

- ☐ **A** how to deal with his mother's emotional state
- ☐ **B** how quickly a condition is likely to develop
- ☐ **C** who to refer to for practical assistance

28. You hear two nurses discussing a patient's care plan.

Before she can be discharged, the patient needs

- (A) to demonstrate that she's sufficiently mobile.
- (B) some help to come to terms with her condition.
- (C) guidance in how to self-administer some medication.

29. You hear a surgeon briefing a team about an upcoming operation.

What is he concerned about regarding the post-operative period?

- (A) when medication will be administered
- (B) how soon the patient will resume smoking
- (C) whether the patient's pain will be managed effectively

30. You hear a dentist talking to a patient.

What is the patient doing?

- (A) complaining about his last appointment
- (B) asking for some remedial work to be carried out
- (C) enquiring about a possible further course of treatment

That is the end of Part B. Now look at Part C.

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about aspects of their work.

For **questions 31-42**, choose the answer (**A**, **B** or **C**) which fits best according to what you hear. Complete your answers as you listen.

Now look at extract one.

Extract 1: Questions 31-36

You hear an interview with a sports injury specialist called Toby Walsh on the subject of hamstring injuries.

You now have 90 seconds to read **questions 31-36**.

31. Toby explains that sports people fear getting hamstring injuries because

- ☐ (A) it takes a long time to recover from one.
- ☐ (B) there is a high risk of recurrence.
- ☐ (C) the therapy can be very painful.

32. Toby explains that hamstring injuries are common in sports which

- ☐ (A) tend to involve players in very long matches.
- ☐ (B) are popular with players of different ages.
- ☐ (C) require players to move in certain ways.

33. In terms of preventing hamstring injuries, Toby mentions that sportspeople need to

- ☐ (A) maintain ease of movement in another part of the body.
- ☐ (B) ensure that warm-up exercises aren't increasing the risk.
- ☐ (C) be cautious about working directly on the muscles concerned.

34. Toby suggests that during intensive training programmes,

- ☐ (A) pain in the hamstring should be seen as a warning sign.
- ☐ (B) working on gluteal muscles can help avoid hamstring problems.
- ☐ (C) people with a history of hamstring strains need to avoid certain exercises.

35. What is Toby's first concern when treating a hamstring injury?

- (A) to get the athlete to describe the symptoms
- (B) to take action to reduce any swelling
- (C) to ensure that pain is well managed

36. What does Toby say about recovering from hamstring injuries?

- (A) The effects may be permanent in some cases.
- (B) It's hard to predict how long it will take in each case.
- (C) Treatment can be counter-productive in less severe cases.

Now look at extract two.

Extract 2: Questions 37-42

You hear a clinical pharmacist called Emma Royce giving a presentation about the side effects of certain types of medication.

You now have 90 seconds to read **questions 37-42**.

37. Emma explains that the condition known as pathological gambling

- (A) was first identified in patients with Parkinson's disease.
- (B) affects a disproportionate number of Parkinson's patients.
- (C) often occurs in Parkinson's patients whatever treatment they're having.

38. Emma says that pathological gambling as a side effect of Parkinson's medication

- (A) may be more extensive than existing data suggests.
- (B) is probably restricted to patients with an existing disorder.
- (C) seems to have been over-estimated in the absence of reliable data.

39. In the case of the patient called Harry, what associated symptom led his wife to discover his gambling problem?
- (A) insomnia
 - (B) loss of appetite
 - (C) compulsive shopping
40. What point does Emma make about the role of underlying risk factors in the development of pathological gambling?
- (A) Certain personal characteristics clearly play a part in this.
 - (B) Prolonged exposure to the drugs makes this hard to assess.
 - (C) There is a lack of conclusive evidence to back up claims about this.
41. Emma feels that the long-term effects of this type of adverse reaction
- (A) can be extremely serious for the patient's wellbeing.
 - (B) are limited because the symptoms soon disappear.
 - (C) depend on the level of support the patient has.
42. What does Emma suggest for the management of drug-induced pathological gambling in Parkinson's patients?
- (A) Patients should decide whether to continue with their medication.
 - (B) Patients should be observed to see how severe their reaction is.
 - (C) Patients should be taken off the medication as soon as possible.

That is the end of Part C.
You now have two minutes to check your answers.

VENUE:

TEST DATE:

Candidate details and photo will be printed here.

CANDIDATE DECLARATION

By signing this, you agree not to disclose or use in any way (other than to take the test) or assist any other person to disclose or use any OET test or sub-test content. If you cheat or assist in any cheating, use any unfair practice, break any of the rules or regulations, or ignore any advice or information, you may be disqualified and your results may not be issued at the sole discretion of CBLA. CBLA also reserves its rights to take further disciplinary action against you and to pursue any other remedies permitted by law. If a candidate is suspected of and investigated for malpractice, their personal details and details of the investigation may be passed to a third party where required.

CANDIDATE SIGNATURE: _____

TIME: APPROXIMATELY 40 MINUTES

INSTRUCTIONS TO CANDIDATES

- DO NOT open this question paper until you are told to do so.
- One mark will be granted for each correct answer.
- Answer ALL questions. Marks are NOT deducted for incorrect answers.
- At the end of the test, you will have two minutes to check your answers.
- At the end of the test, hand in this Question Paper.
- You must not remove OET material from the test room.

HOW TO ANSWER THE QUESTIONS

- Part A: Write your answers on this Question Paper by filling in the blanks. Example: Patient: John Smith
- Part B & Part C: Mark your answers on this Question Paper by filling in the circle using a 2B pencil. Example:

A

B

C

Occupational English Test

Listening: Test One

This test has three parts. In each part you'll hear a number of different extracts. At the start of each extract, you'll hear this sound: --beep--

You'll have time to read the questions before you hear each extract and you'll hear each extract **ONCE ONLY**.

Complete your answers as you listen.

At the end of the test, you'll have two minutes to check your answers.

Part A

In this part of the test, you'll hear two different extracts. In each extract, a health professional is talking to a patient.

For **questions 1-24**, complete the notes with information you hear.

Now, look at the notes for extract one.

Extract 1: Questions 1-12

You hear a knee specialist talking to a new patient called Jason Riley. For **questions 1-12**, complete the notes with a word or short phrase.

You now have 30 seconds to look at the notes.

Patient	Jason Riley
Patient history	• knee became swollen after playing (1) _____ (two years ago) - responded to rest • diagnosed with bursitis - some family history (mother had it in her (2) _____) • now works as a (3) _____ (changed one year ago) • recurrence of swelling, knee also appeared (4) _____ (six months ago) - some pain - developed mild fever. • medicated for a possible (5) _____ (some improvement) - some swelling/ache continued
Further treatment	• occasional use of painkillers (n.b. has adverse reaction to (6) _____) • applied (7) _____ to the affected area • followed an exercise regime (elevation of leg) • used a (8) _____ at night to keep the leg raised. • aspiration – (9) _____ of fluid removed
GP's recommendations	• use (10) _____ in footwear • apply (11) _____ to knees whilst working • lose weight (not achieved)
Most recent treatment	• three courses of (12) _____

Extract 2: Questions 13-24

You hear a neurologist talking to a new patient called Sylvia Gunn. For **questions 13-24**, complete the notes with a word or short phrase.

You now have 30 seconds to look at the notes.

Patient	Sylvia Gunn
Patient history	• pain in tooth (three years ago) - site of previous (13) _____ • dentist administered (14) _____ • intermittent pain – in bursts of (15) _____ duration. • pain exacerbated by use of (16) _____ • referred to GP
Further treatment	• GP prescribed painkillers (had no effect) • (17) _____ excluded sinusitis (previous history), and nerve damage. • Anti-epilepsy medication prescribed (with some success)
Current position	• tooth pain irregular – periods of remission • experiences (18) _____ in the jaw immediately prior to the onset of pain • similar symptoms affecting eye (same side of face) • maybe triggered by: - move to a new (19) _____ - exposure to (20) _____ (in warmer months) • some relief from symptoms when wearing (21) _____ • symptoms worsening – at peak occurring every (22) _____ • has experienced (23) _____ loss • has stopped attending (24) _____ (feelings of isolation/depression)

That is the end of Part A. Now look at Part B.

Part B

In this part of the test, you'll hear six different extracts. In each extract you hear people talking in a different healthcare setting.

For **questions 25-30**, choose the answer (**A**, **B** or **C**) which fits best according to what you hear. You'll have time to read each question before you listen. Complete your answers as you listen.

Now look at question 25.

- 25.** You hear two nurses conducting a patient handover.

What does the incoming nurse need to do?

- ☐ (A) organise a radiography visit
- ☐ (B) obtain the results of some tests
- ☐ (C) carry out a further risk assessment

- 26.** You hear a GP talking to a patient.

What does he recommend for her anaemia?

- ☐ (A) taking appropriate medication
- ☐ (B) making specific changes to her diet
- ☐ (C) having further tests to confirm the diagnosis

- 27.** You hear a senior nurse briefing a colleague about working in the recovery room.

What does she say about extubation?

- ☐ (A) Only the doctors can authorise it.
- ☐ (B) It always needs to be done in theatre.
- ☐ (C) The nurse won't be required to deal with it.

28. You hear a dentist talking to a patient.

What has the patient misunderstood about the treatment for his tooth?

- (A) the material that will be used
- (B) the type of reconstruction he'll have
- (C) the amount of money he'll have to pay

29. You hear a triage nurse in the emergency department talking to a doctor.

What is he doing?

- (A) asking to review an assessment he's made
- (B) admitting that he's made a mistake
- (C) passing on a complaint

30. You hear an eye surgeon briefing some new staff at the eye clinic.

What is she doing?

- (A) advising them how to deal with some difficult referrals
- (B) explaining how easily symptoms can be missed
- (C) stressing the need to gain wide experience

That is the end of Part B. Now look at Part C.

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about aspects of their work.

For **questions 31-42**, choose the answer (**A**, **B** or **C**) which fits best according to what you hear. Complete your answers as you listen.

Now look at extract one.

Extract 1: Questions 31-36

You hear an interview with a dietician called Ben Melrose who's talking about iodine deficiency.

You now have 90 seconds to read **questions 31-36**.

31. Ben says the main reason so many people lack iodine in their diet is
- (A) the type of foods they choose to eat.
 - (B) the distance they live from the sea.
 - (C) their lack of economic resources.
32. Ben says that the commonest symptom of iodine deficiency tends to be
- (A) chronic fatigue.
 - (B) poor levels of concentration.
 - (C) difficulty in retaining body heat.
33. Before she left South America for Europe, Ben's patient called Mirabelle
- (A) had already begun to develop symptoms of iodine deficiency.
 - (B) had a more varied diet than she adopted on her return.
 - (C) hadn't been affected by the lack of iodine in her diet.
34. How did Mirabelle feel when she realised she'd developed a goitre?
- (A) alarmed there might be a non-dietary explanation for it
 - (B) embarrassed not to have recognised the warning signs
 - (C) surprised because she thought her diet was sufficiently varied

35. What did Ben advise Mirabelle to do?
- (A) eat certain foods in combination
 - (B) avoid all types of processed food
 - (C) reduce her reliance on supplements
36. What conclusions does Ben draw about iodine deficiency from Mirabelle's case?
- (A) worldwide levels may have been overestimated
 - (B) large numbers of people are at risk of suffering from it
 - (C) any change in dietary habits can increase susceptibility to it

Now look at extract two.

Extract 2: Questions 37-42

You hear a plastic surgeon called Norma Woolston giving a presentation about surgical treatment for a condition called Dupuytren's contracture.

You now have 90 seconds to read **questions 37-42**.

37. Norma says that when the condition is diagnosed early enough,
- (A) medication can ease the pain that it causes.
 - (B) therapy will reverse the loss of movement.
 - (C) surgery may still be needed eventually.
38. When the patient called Eric first presented with the condition, Norma
- (A) felt that his occupation may be making the symptoms worse.
 - (B) realised that more than the little finger was affected.
 - (C) could see that he found it embarrassing.

39. Norma feels that Eric's condition may have a genetic basis because
- (A) other risk factors were found to be present.
 - (B) there was a history of related conditions in the family.
 - (C) he belonged to an ethnic group with a high incidence of it.
40. Before agreeing to undergo surgery, Eric expressed concerns about
- (A) whether it was really necessary.
 - (B) the possible side effects of anaesthesia.
 - (C) how it would impact on his general health.
41. What problem did Eric have in the period immediately after the procedure?
- (A) He experienced an unexpected level of pain.
 - (B) He found that he had difficulty in sleeping.
 - (C) He was unable to get all his work done.
42. At his final consultation, Eric revealed that he felt
- (A) dissatisfied with the outcome of the treatment.
 - (B) concerned about the chances of the condition recurring.
 - (C) surprised at how long it took him to recover from the procedure.

That is the end of Part C.

You now have two minutes to check your answers.

Test No: 29

Patient

Mr Lajowski

Details about procedure

- removal of lump from back
- lump located near (1)
- worried about (2) after operation.

Medical history

- has (3)
- duration - approximately 5 years

Physical problems

- trouble (4)
- falls over sometimes
- sometimes freezes in one spot (akinesia)
- (5)shake a lot
- (6) arms

Problems with daily activities

- (7) in bed
- reaching for things
- turning around when (8) from a chair
- tying shoelaces
- doing and undoing (9)
- untidy (10)

Other issues

- cramps at night - 12 months
- patient's (11) is affected
- recently changed medication - cramps (12)

Patient

Chloe

6 months ago

Valium from GP

4 months ago

(1) began

3 weeks ago

discharged from hospital

Patient's description of symptoms

- felt like she was going to fall over
- (2)
- trouble walking
- heavy legs
- palpitations
- possible (3)
- became (4)
- heavy arms
- difficult to (5) things
- (6) in arms

Possible causes

- busy lifestyle
- possible underlying (7)

Other symptoms

- early stage (8) in hands

Personal history

- married for two years
- husband - steel fitter (own business)
- fights about keep the (9)
- have seen a gynaecologist (10)twice
- waiting on husband's test results
- returning in (11)

Recommendations

- prescribed (12) for anxiety
- follow-up appointment in two weeks

Part B

Questions 1 - 6

In this part of the test, you'll hear six different extracts. In each extract, you'll hear people talking in a different healthcare setting.

For questions 1 to 6, choose the answer (A, B or C) which fits best according to what you hear.

Question 1 Audio

Question 1

Question text

You hear a doctor talking to the daughter of a patient from an aged care home.

The doctor wants to

Select one:

- ☐ A. ensure that Mrs Cox's father has a good quality of life.
- ☐ B. advise Mrs Cox that her father has Alzheimer's disease.
- ☐ C. explain the improvements in medical treatment to Mrs Cox.

Question 2 Audio

Question 2

Question text

You hear a consultant giving a talk to a group of trainees.

What is the purpose of the talk?

Select one:

- ☐ A. to highlight the symptoms associated with a head injury.
- ☐ B. to discuss the importance of waking patients after a head injury.
- ☐ C. to convey the significance of the initial 24 hours after a head injury.

Question 3 Audio

Question 3

Question text

You hear a vet talking to a client who brought this pet cat, Jimmy, to the vet clinic.
What does the vet say has caused Jimmy's problem urinating?

Select one:

- ☐ A. Stress from renovations.
- ☐ B. A fatal urethral obstruction.
- ☐ C. Struvite crystals in his urethra

Question 4 Audio

Question 4

Question text

You hear the nurse unit manager (NUM) discussing the progress of a patient at a multi-disciplinary team meeting.

What does she indicate about the patient's son?

Select one:

- ☐ A. That he hasn't been feeding the patient.
- ☐ B. That the patient is largely dependent on him.
- ☐ C. That he is having problems in his role as a carer.

Question 5 Audio

Question 5

Question text

You hear a radiographer talking to nursing staff at an aged care centre.

The radiographer is

Select one:

- ☐ A. helping nurses prepare patients for CT scans.
- ☐ B. stressing the importance of contrast media in CT scans.
- ☐ C. highlighting problems that occur when conducting CT scans.

Question 6 Audio

Question 6

Question text

You hear a GP discussing psoriasis with a patient.

The GP recommends sunbed treatment because

Select one:

- ☐ A. UVB light is unique in a hospital setting.
- ☐ B. there is currently a shortage of cream.
- ☐ C. it will help with the effects of the rash.

Listening Part C: Tetanus

Information text

For questions 1 to 6, choose the answer (A, B or C) which first best according to what you hear.

Tetanus Audio

You hear a nurse called Sally Perkins giving a presentation on tetanus to a group of hospital trainees.

Question 1

Question text

What is the main focus of Sally's talk on tetanus?

Select one:

- ☐ A. It is impossible to avoid tetanus bacteria.
- ☐ B. It is essential to be vaccinated against tetanus.
- ☐ C. It is important to develop natural tetanus immunity.

Question 2

Question text

Sally believes that deaths from tetanus still occur because

Select one:

- ☐ A. the bacteria is about to infect a person through the tiniest of wounds.
- ☐ B. infected people don't seek medical treatment early enough.
- ☐ C. not enough people are immunised against tetanus.

Question 3

Question text

Why do some people believe the tetanus vaccine isn't necessary?

Select one:

- ☐ A. Tetanus bacteria can't enter a person's bloodstream.
- ☐ B. Tetanus bacteria are everywhere, giving people natural immunity.
- ☐ C. Tetanus bacteria aren't affected by medication or vaccination.

Question 4

Question text

Sally suggests the woman didn't understand the dangers of tetanus because

Select one:

- ☐ A. she hasn't undergone a recent vaccination.
- ☐ B. she sought medical treatment very late.
- ☐ C. she ignored many early warning signs.

Question 5

Question text

Sally highlights the case of the 4-year-old boy to

Select one:

- ☐ A. explain the symptoms of tetanus infection.
- ☐ B. show how tetanus can affect small children.
- ☐ C. illustrate how difficult it is to diagnose tetanus.

Question 6

Question text

Why does Sally believe the man's case highlights how everyone is at risk of tetanus?

Select one:

- ☐ A. Because he arrived at hospital with no health complaints.
 - ☐ B. Because the man had no injuries, but he still had tetanus.
 - ☐ C. Because he couldn't remember when he was immunised.
-

Listening Part C: Sochi Winter Olympics

Information text

For **questions 1 to 6**, choose the answer (A, B or C) which first best according to what you hear.

You hear an interview with Dr Delia Mene, who was Team USA's Chief Medical Officer (CMO) at the Sochi Winter Olympic Games.

Winter Olympics Audio

Question 1

Question text

Dr Mene suggests that her role as CMO required her to

Select one:

- ☐ A. use a range of care options to assist athletic performance.
- ☐ B. work longer hours than usual to manage all the injuries.
- ☐ C. exercise sympathy because it was busy for everyone.

Question 2

Question text

Dr Mene says the medical support of athletes

Select one:

- ☐ A. was tailored to the specific needs of the individual.
- ☐ B. was the same as treating patients at a medical clinic.
- ☐ C. depended on the type of health care provider available.

Question 3

Question text

What is Dr Mene's view on providing care for life-threatening injuries?

Select one:

- ☐ A. A level of team work would have ensured a positive outcome.
- ☐ B. They knew there wouldn't be any to attend at the Olympics.
- ☐ C. If they had occurred, flexible treatment would have been required.

Question 4

Question text

Dr Mene says her team prevented injuries by

Select one:

- ☐ A. reducing the amount of competition and travel for each athlete.
- ☐ B. evaluating what athletes ate and what they did after competing.
- ☐ C. having more advanced technology than other competing nations.

Question 5

Question text

Dr Mene was impressed with the software they used because

Select one:

- ☐ A. it was particularly useful for musculoskeletal injuries.
- ☐ B. it had tremendous communication potential.
- ☐ C. it can help in critical care situations.

Question 6

Question text

Dr Mene thinks any physician wanting to treat athletes at a major sporting event should

Select one:

- ☐ A. understand that you won't make a lot of money doing it.
- ☐ B. apply what they learn at these events to their private practice.
- ☐ C. take the time to forge connections that enhance your reputation.

Test No: 11

Part A

In this part of the test, you hear two different extracts. In each extract, a Dermatologist is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a physician talking to a new patient called Mrs. Dalilah. For questions 1 to 12, complete the following notes with a word or short phrase You now have thirty seconds to look at the notes.

Patient : Miss Elissa **Age :** 19

Symptoms & disease : _____ (1)

Patient's description of symptoms: getting acne on chin, right temple and left temple and the condition is still worsening.

_____ : menses commenced at the age of thirteen cycle once in 24 days, light flow, lasts for six days

Medical history : has been taking Alesse-28, 20 mcg-0.10 mg tablet since _____ (2)& _____ (3)

: drinks socially

: _____ (4) 4 servings a day

Family history : her mother has _____ (5) and anxiety

Allergies : _____ (6) causing difficulty in breathing

Physical examination : periodic reddening of face, acne problems and allergies.

: face shows _____ (7)

Further treatment : _____ (8) capsule

: _____ (9) therapy with _____ (10) 100 mg a day.

Dietary suggestions : should avoid processed sugar, caffeine, dairy products and processed foods.

: should eat foods that are rich in _____ (11) anti-inflammatory compounds and other acne-fighting nutrients.

: blueberries, sweet potatoes, green tea, carrots, cilantro, _____ (12) oats, apples, barley and mustard greens.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : _____ (13)

Age : 36

Symptoms started : three months ago

Patient's description of symptoms: tiresome, _____ (14) and an upset stomach. _____ (15) for the last three weeks.

: No fever. Feeling sleeplessness

: Stress at workplace

: lost _____ (16) recently.

Further investigation : blood test and _____ (17) to identify the bacteria _____ (18) & _____ (19) pneumophila.

Further treatment : _____ (20) orally every 24 hours for _____ (21)

: _____ (22) pneumonia vaccine

Dietary suggestions : plenty of fruit juice and fresh fruits, _____ (23) milkshakes, smoothies. plenty of full-cream milk or yoghurt, or even ice cream, with light meals

of _____ (24) fish or eggs and cooked vegetables.

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at question 25

(25) You hear a physician explaining to his nurse about Skin Cancer.

Which of the following is not a less common type of skin cancer?

- A. Kaposi sarcoma
- B. Merkel cell cancer
- C. Squamous cell carcinoma

ANSWER:

(26) You hear a physician explaining to his patient about Depressive Disorder.

Which of the following is not a symptom of depressive disorder?

- A. hopelessness
- B. aggressiveness
- C. Irritability

ANSWER:

(27) You hear the discussion of two doctors about the frailty score concept in aged patients.

Which of the following statement suits this extract best?

- A. The frail patient and their loved ones should consider the consequences of surgery before it begins.
- B. Frailty score is a good concept that may dictate the objective of the surgery.
- C. Decline of physiologic reserve is a normal consequence of the aging process.

ANSWER:

(28) You hear the discussion between two doctors about Epidermolysis Bullosa in children.

Abnormal fingernails and toenails are the symptoms of;

- A. Dystrophic Epidermolysis Bullosa
- B. Junctional Epidermolysis Bullosa
- C. Epidermolysis Bullosa Simplex

ANSWER:

(29) You hear the physician briefing to his staff about Clonus disease.

Clonus is caused when;

- A. The muscle cells are damaged
- B. The nerve cells are damaged
- C. The muscle pulses for an extended period

ANSWER:

(30) You hear the discussion between two doctors about how to cope with delirium in patients in ICU.

Which of the following statements best suits this extract?

- A. Haloperidol is unsuccessful to prevent delirium in ICU patients.
- B. Delirium is associated strongly with cognitive impairments for a long term.
- C. Medications aren't the right approach always.

ANSWER:

Now look at Part C

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a senior surgeon on the Role of Diabetes in the End-Stage Renal Disease.

You have 90 seconds to read questions 31 to 36

(31) Microalbuminuria is detected after 5 years in;

- A. Type 1 diabetes
- B. Type 2 diabetes
- C. Microvascular complications

ANSWER:

(32) Which one of the following is the first-line agent in diabetes patients?

- A. Diuretics
- B. Angiotensin Receptor Blockers
- C. Dihydropyridines

ANSWER:

(33) Which is the recommended protein intake in the case of declining glomerular filtration ratio?

- A. 2.3 grams per kilogram weight per day
- B. 0.8 grams per kilogram weight per day
- C 0.6 grams per kilogram weight per day

ANSWER:

(34) The evidence of microalbuminuria should trigger the investigation of;

- A. Abnormal levels of albumin in the urine

- B. Vascular diseases
- C. Glomerular filtration ratio

ANSWER:

(35) The end-stage renal disease is higher in;

- A. Cardiovascular patients
- B. Type 2 diabetics
- C. Type 1 diabetics

ANSWER:

(36) Which is the primary factor that accounts for the pathophysiology of diabetic nephropathy?

- A. Formation of advanced glycosylation end products by irreversibly binding to proteins in kidney
- B. Anatomical and structural changes in the kidney
- C. Narrowing of the efferent arteriole in the glomerulus

ANSWER:

Extract 2

Questions 37 to 42

You hear the instruction given by a physician to his staff about a senior surgery on Alpha and Beta Thalassemia.

You have 90 seconds to read questions 37 to 42

(37) In newborns, alpha thalassemias produce;

- A. Excess beta chain
- B. Excess gamma chain
- C. Unstable tetramers

ANSWER:

(38) Hemoglobin H disease is caused due to;

- A. Missing of three loci
- B. Missing of two loci
- C. Missing of four loci

ANSWER:

(39) Stillbirth is caused due to;

- A. Missing of two loci
- B. Missing of four loci
- C. Missing of three loci

ANSWER:

(40) If the red blood cells are smaller than normal, the condition is called;

- A. Erythrocytes
- B. Hemoglobin Barts

C. Microcytosis

ANSWER:

(41) Which of the following statements is incorrect?

A. Beta thalassemia trait occurs when two beta globin genes are mutated.

B. Alpha globin is made on chromosome 11

C. Beta thalassemia trait patients can pass on thalassemia to their children

ANSWER:

(42) In which of the following diseases do children start developing symptoms within two years of their life?

A. Beta thalassemia intermedia

B. Beta thalassemia major

C. Beta thalassemia trait

ANSWER

Test No: 21

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Mr. Breegi. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. Breegi

Age : 42

Symptoms & disease : onset of a headache

Patient's description of symptoms: onset of a headache problem. headache started 2 months ago. The headaches are (1) feels a sensation of pressure. The intensity is moderately severe, making regular activities difficult. getting symptoms of (2)

: Regular drinker, doesn't smoke

: no muscle cramps, joint pain, back pain or limb pain

: no musculoskeletal problems

: no cardiovascular or gastrointestinal problems

Family history of illness : father and brother have (3)

Medications : none

Diagnosis : sense of smell of (4) Neck range of motion was normal in all directions. There was no evidence of (5) No radicular symptoms were (6) (7) was bilaterally normal. There were no areas of tenderness. Tests of (8) were negative. There were no (9) Back range of motion was normal in all directions. Position and (10) was

normal. gait has no abnormal components. Tandem gait was performed normally There is no edema or significant varicosities

Impression : migraine (11)

Further treatment : (12)

half tablet twice a day for one week

one tablet twice a day for the next week

one table thrice a day for the third week.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Randy Crome. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Randy Crome

Age : 64

Symptoms & disease : a new murmur, bacteremia and fever

Patient's description of symptoms: having jaundice and a (13) recently noted a new murmur, bacteremia and fever. no cardiac history or orthopnea paroxysmal nocturnal dyspnea no chest pain, palpitations or syncope Past medical history : had diabetes, hypertension, and (14) long bac

Medications : Acidophilus supplement, Cholestyramine, (15) Diovan 160 mg twice daily, Lantus 10 daily, (16) NovoLog 70/30, 10 units at 12 noon daily, (17) Vitamin D3 one tablet weekly

Allergies : Codeine, Coreg & (18)

Diagnosis : laboratory data shows sodium 133, potassium 2.8, chloride 99, (19) glucose 75, BUN 12, creatinine 0.8, calcium 8.6, (20) AST 63, and ALT 43. White count 5.4, hemoglobin 9.1, (21) and platelet count 128,000. (22) abdomen CT diagnosis show a pancreatic mass with biliary obstruction. Previous biliary stent was present. electrocardiogram shows normal sinus rhythm. There are no acute ST-T changes.

Impression : a newly developed murmur that has occurred in the setting of fever and bacteremia. has a pancreatic mass with jaundice, hypertension, (23)

Further diagnosis : echocardiogram to assess for the (24) which may be contributing to her symptoms

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

(25) You hear a discussion between a doctor and nurse about different types of kidney cancer cells.

Which of the following cancers does not spread beyond kidneys?

- A. Oncocytoma
- B. Angiomyolipoma
- C. Sarcomatoid

ANSWER:

Extract 2

(26) You hear a discussion between a doctor and nurse about fibrosis.

Which of the following types of fibrosis is mainly caused by alcoholism?

- A. Mediastinal fibrosis
- B. Myelofibrosis
- C. Cirrhosis

ANSWER:

Extract 3

(27) You hear a discussion between a doctor and nurse about autophagy.

An autophagosome forms during;

- A. Chaperone-mediated autophagy
- B. Macroautophagy
- C. Microautophagy

ANSWER:

Extract 4

(28) You hear a discussion between a doctor and nurse about the role of epinephrine in human body.

Epinephrine binds to beta-2-adrenergic receptors on

- A. Heart muscle cells
- B. Liver cells
- C. Bronchial muscle cells

ANSWER:

Extract 5

(29) You hear a discussion between a doctor and nurse about Ringworm diseases.

Which of the following fungal infections causes a jock itch?

- A. Tinea cruris
- B. Tinea corporis

C. Tinea unguium

ANSWER:

Extract 6

(30) You hear a discussion between a doctor and nurse about different types rheumatoid arthritis.

Which of these may also include eye inflammation?

- A. Seropositive rheumatoid arthritis
- B. Juvenile idiopathic arthritis
- C. Seronegative rheumatoid arthritis

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a physician on migraines and headaches.

You have 90 seconds to read questions 31 to 36

(31) Which of the following migraines doesn't have a headache symptom?

- A. Alice in Wonderland syndrome
- B. Acephalgic migraine
- C. Abdominal migraine

ANSWER:

(32) Which of the following conditions is diagnosed more often in men than in women?

- A. Basilar-type migraine
- B. Cluster headache
- C. Chronic daily headache

ANSWER:

(33) Which of the following conditions involves symptom of snoring?

- A. Hemicrania continua
- B. Cluster headache
- C. Chronic daily headache

ANSWER:

(34) Which of the following conditions is not considered as a migraine?

- A. Hemiplegic migraine
- B. Hemicrania continua
- C. Basilar-type migraine

ANSWER:

(35) Which of the following types of migraine does not have the speech slurring symptom?

- A. Hemicrania continua
- B. hemiplegic migraine
- C. Basilar-type migraine

ANSWER:

(36) Which of the following conditions includes the symptom of sensitivity to light?

- A. Status migrainosus
- B. Retinal migraine
- C. Transformed migraine

ANSWER:

Extract 2

Questions 37 to 42

You hear the monologue of a physician giving a lecture on Acanthamoeba Infection.

You have 90 seconds to read questions 37 to 42

(37) Encephalitis mainly involves

- A. Brain
- B. Eye
- C Skin

ANSWER:

(38) Granulomatous Amebic Encephalitis is often confused with;

- A. Systemic lupus erythematosus
- B. Ischemic stroke
- C. Renal failure

ANSWER:

(39) Which of the following conditions caused by Acanthamoeba could result in coma and mortality?

- A. Neurologic deficits
- B. Ischemic stroke
- C. Intracranial pressure

ANSWER:

(40) Which of the following is not a predisposing factor for Acanthamoeba keratitis?

- A. Low levels of Immunoglobulin A antibodies in tear films
- B. Changes in the surface of the cornea
- C. Systemic lupus erythematosus

ANSWER:

(41) The process of Acanthamoeba keratitis begins with

- A. Vigorous inflammatory response
- B. Stromal invasion
- C. Disintegration of the epithelial barrier

ANSWER:

(42) Skin lesions caused by Acanthamoeba usually starts as;

- A. Firm papules nodules
- B. Focal necrosis
- C. Indurated ulcerations

ANSWER:

Test No: 22

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Dzhambul. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Dzhambul

Age : 45

Symptoms & disease : swelling developed on left testicle.

Patient's description of symptoms: had marginal B-cell lymphoma and cured with (1) two years ago. developed a diffuse large B-cell lymphoma last year and was treated with CHOP/reduction. The disease was again (2)

: a swelling developed on left testicle last week. had fevers and chills for the past few days and felt weak.

: used to smoke and drink, but stopped from last year

Family history of illness : mother had paralysis before her death at 70. father is deceased at age 84 of a (3)

56-year-old brother with type-two (4) secondary to diabetic retinopathy. 41-year-old younger brother has hypertension. younger sister has (5)

Diagnosis : laboratory data shows white (6) hemoglobin 14.3, (7) platelets 235,000. SMA-7 shows a (8) Glucose is 213.

Physical examination : no conjunctival pallor or icterus. No adenopathy. No carotid bruits. Lungs are clear. No gallop or murmur in heart. Your right testicle is (9) and tender. Endocrine shows (10)

Impression : left testicular swelling. It is tender. Etiology - possible epididymitis or (11)

Further diagnosis : ultrasound tests for (12) CT scan of abdomen and pelvis upon seeing the ultrasound reports.

Further treatment : IV antibiotics.

Extract 2:

Questions 13 to 24

You hear a physician talking to a patient called Thomas Andrews. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Otgonbayar

Age : 47

Symptoms & disease : sinus, getting postnasal drainage, facial pain, headaches, sore throat and congestion

Patient's description of symptoms: has sinus problem with postnasal drainage, facial pain, headaches, sore throat

and congestion for the past two weeks. getting snoring, (13) condition worsens in morning and evening

: doesn't drink, but smokes 1 pack of cigarettes per day for the past 15 years

Past medical history : surgeries to (14)

Family history of illness : (15)

Medications : Claritin, (16)

Diagnosis : auricles/external auditory canals reveal no significant abnormalities bilaterally. TMs intact with no middle ear effusion and are mobile to insufflation. (17) reveals moderate congestion and purulent mucus. (18) shows teeth/alveolar ridges reveals missing molar. (19) shows a prominent uvula and purulent postnasal drainage.

The (20) The palpation of anterior neck reveals no tenderness. Examination of the posterior neck shows mild tenderness to (21) Facial examination shows there is (22) tenderness to palpation. Water's view x-ray reveals bilateral maxillary mucosal thickening.

Impression : (23) Snoring (786.09).

Further treatment : Augmentin. 875 mg twice a day and (24) for three weeks.

Further diagnosis : mini sinus CT if the condition doesn't improve in three weeks

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

(25) You hear a discussion between a doctor and nurse about hypoxia and its causes.

Which of the following conditions arises due to decreased blood flow to the tissues?

- A. Hypoxic hypoxia
- B. Histotoxic hypoxia
- C. Stagnant hypoxia

ANSWER:

Extract 2

(26) You hear a discussion between a doctor and nurse about the disease called botulism.

Which of these may occur due to a cosmetic surgery?

- A. Adult intestinal toxemia botulism
- B. Iatrogenic botulism
- C. Wound botulism

ANSWER:

Extract 3

(27) You hear a discussion between a doctor and nurse about gastroesophageal reflux disease.

Esophageal hiatus occurs in which of the following conditions?

- A. Esophageal Irritation
- B. Hiatal hernia
- C. Motility disorder

ANSWER:

Extract 4

(28) You hear a discussion between a doctor and nurse about congenital myopathy and its types.

Which of the following diseases is associated with respiratory muscle weakness?

- A. Nemaline myopathy
- B. Metabolic myopathy
- C. Mitochondrial myopathy

ANSWER:

Extract 5

(29) You hear a discussion between a doctor and nurse about primary brain tumors.

Which of the following primary brain tumors cannot be grade I?

- A. Oligodendroglioma
- B. Astrocytoma
- C. Meningioma

ANSWER:

Extract 6

(30) You hear a discussion between a doctor and nurse about different types of aspergillosis.

Which of the following types of aspergillosis is caused through a break in the skin?

- A. Cutaneous aspergillosis
- B. Aspergilloma
- C. Invasive aspergillosis

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a physician on different categories of strokes and their location.

You have 90 seconds to read questions 31 to 36

(31) The stroke caused by embolus is;

- A. Watershed stroke
- B. Ischemic stroke
- C. Hemorrhagic stroke

ANSWER:

(32) Brain aneurysm is caused in

- A. Ischemic stroke
- B. Watershed stroke
- C. Hemorrhagic stroke

ANSWER:

(33) Low blood supply to susceptible regions of the brain causes

- A. Hemorrhagic stroke
- B. Watershed stroke
- C. Ischemic stroke

ANSWER:

(34) A condition called paranoia is caused in the patients who had a;

- A. Cortical stroke
- B. Hemorrhagic stroke
- C. Frontal lobe stroke

ANSWER:

(35) Trouble understanding the spoken or written language is caused due to;

- A. Frontal cortex stroke
- B. Temporal cortex stroke
- C. Occipital cortex stroke

ANSWER:

(36) Which of the following strokes does not affect the speech?

- A. Frontal cortex stroke
- B. Brainstem stroke
- C. Parietal cortex stroke

ANSWER:

Extract 2

Questions 37 to 42

You hear the monologue of a physician giving a lecture on Hemolytic Anemia.

You have 90 seconds to read questions 37 to 42

(37) The hemolytic anemia caused due to inadequate hemoglobin is;

- A. Sickle Cell Anemia
- B. Thalassemia

C. Inherited Hemolytic Anemia

ANSWER:

(38) Inherited Hemolytic Anemia is caused due to;

- A. Faulty genes
- B. Abnormal hemoglobin
- C. Abnormal red blood cells

ANSWER:

(39) Which of the following is not caused by a defective surface membrane of the red blood cells?

- A. Thalassemi
- B. Hereditary Elliptocytosis
- C. Hereditary Spherocytosis

ANSWER:

(40) Which of the following diseases may be caused by naphthalene?

- C. Pyruvate Kinase Deficiency
- B. Immune Hemolytic Anemia
- C. Glucose-6-Phosphate Dehydrogenase Deficiency

ANSWER:

(41) The disease caused in pregnant women due to a difference in the blood group of the fetus;

- A. Alloimmune hemolytic anemia
- B. Autoimmune hemolytic anemia
- C.. Pyruvate kinase deficiency

ANSWER:

(42) Preeclampsia is;

- A. A malignant hypertension or a rare blood disorder
- B. A condition that causes high blood pressure during pregnancy
- C. A condition that causes seizures in pregnant women

ANSWER:

Test No: 23

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : James

Age : 21

Symptoms & disease : pain on right shoulder

Patient's description of symptoms: throbbing pain on the right shoulder for (1)

: pain aggravates, as he plays baseball regularly also
participating in (2)

:

Medications : (3) Drugs & muscle relaxant medications

Family history of illness : mother has (4)

Physical examination : blood pressure is 116/68, respiratory rate 16, heart rate 68

: weight 165 lbs

: right shoulder shows evidence of (5) (6) are
2/4, bilateral. Brachial pulses are 2/4 bilateral

: range of motion of right shoulder shows (7) decreased
extension

rotation : (8) decreased internal rotation and decreased external

: (9) is moderate

Diagnosis : x-ray report reveals presence of (10)

Further treatment : (11) tablet once a day.

: injection to shoulder joint with (12) 1.0 cc.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mrs. Gonsalves. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mrs. Gonsalves

Age : 48

Symptoms & disease : sudden dizziness and had some cold sweats, shortness in breath & became unconscious

Medical history : (13) diagnosed a year ago. had an IVC filter placed due to massive (14) and gastric ulcers (15) and no anticoagulation due to history of (16) Coronary artery disease status was (17) had to stay in the ICU for 3 weeks due to lower GI bleed again.

Medications : Aspirin, Potassium, Lasix, (18) Lisinopril, Pacerone, Protonix, Toprol, Vitamin B, Zetia, (19)

Physical examination : blood pressure is 155/57, pulse rate is 61, respirations 18 & (20) is 95% on room air. No lymph nodes or masses. No lower extremity edema. No redness or hotness.

Diagnosis : laboratory reports show (21) _____ and hemoglobin 9.6. Your chest x-ray is clear.

Impression : (22) _____ to anticoagulation due to recurrent gastrointestinal bleed, status post IVC filter.

_____ : pulmonary hypertension suspected

_____ : (23) _____ disease, coronary artery disease, and (24) _____ disease per Cardiology

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a physician and nurse explaining about schistosomiasis and its causes.

Which of the following is the infectious form of schistosomiasis?

- A. Schistosoma mansoni
- B. Cercariae
- C. S. Haematobium

ANSWER:

(26) You hear a discussion between two doctors about the importance of measuring serum amylase or serum lipase

Which of the following statements is correct?

- A. Measuring only serum amylase is adequate for diagnosing acute pancreatitis.
- B. The sensitivity and specificity of serum amylase is more than serum lipase.
- C. Serum lipase rises more quickly and remains elevated longer.

ANSWER:

(27) You hear a discussion between two doctors about the misdiagnosing of acute cardiorenal syndrome as renal injury due to hypovolemia.

What is the suggested method to differentiate acute cardiorenal syndrome & renal injury due to hypovolemia?

- A. Assessing the history of recent diuretic overuse
- B. Evaluating the urine electrolytes
- C. Diagnosing hypervolemia

ANSWER:

(28) You hear a physician explaining to his nurse about sepsis & infection.

Which of the following germs is also called staph?

- A. Escherichia Coli
- B. Streptococcus
- C. Staphylococcus aureus

ANSWER:

(29) You hear a discussion between two doctors about brain imaging prior to lumbar puncture in the suspected cases of bacterial meningitis.

Which of the following statement is correct?

- A. Lumbar puncture should be delayed for patients with focal neurologic deficits.
- B. Can start the treatment even without a lumbar puncture with obtaining the blood culture report.
- C. A brain imaging should be performed for all the patients with bacterial meningitis.

ANSWER:

(30) You hear a monologue by a physician about managing aneurysmal subarachnoid hemorrhage.

Which of the following is a significant symptom of aneurysmal subarachnoid hemorrhage?

- A. Rebleeding
- B. Severe headache
- C. Cardiac and pulmonary abnormalities

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the doctor's lecture on Acute cardiorenal syndrome.

You have 90 seconds to read questions 31 to 36

(31) Which of the following statements is correct?

- A. If the primary problem of cardiorenal syndrome is in the heart it is called renocardiac syndrome.
- B. Acute exacerbation of heart failure is called renocardiac syndrome.
- C. If the primary problem is not in the heart or kidneys then the condition is called secondary cardiorenal syndrome.

ANSWER:

(32) Which of the following involves the end-stage kidney disease?

- A. RIFLE
- B. AKIN
- C. Acute cardiorenal syndrome

ANSWER:

(33) Cardiogenic shock is characterized by;

- A. Worsening pulmonary
- B. Hypoperfusion
- C. Hypervolemia

ANSWER:

(34) Which of the following statements is correct?

- A. Hypovolemic is the hallmark of acute heart failure.

- B. Worsening pulmonary is a condition in cardiogenic shock.
- C. Hypoperfusion can cause systemic organ damage.

ANSWER:

(35) Renal perfusion is reduced in acute heart failure due to

- A. Renal venous congestion
- B. Hypoperfusion
- C. Abrupt decrease of cardiac pump function

ANSWER:

(36) Which of the following effects is not caused by aggravation in sympathetic hyperactivity?

- A. Increased renal perfusion
- B. Constriction of efferent and afferent arterioles
- C. Increased tubular sodium and water reabsorption

ANSWER:

Extract 2

Questions 37 to 42

You hear the doctor giving a lecture on anticoagulation therapy for patients with endocarditis.

You have 90 seconds to read questions 37 to 42

(37) Which of the following statements is incorrect?

- A. Anticoagulation is inevitable in the patients with endocarditis
- B. Endocarditis alone is not an indication for anticoagulation
- C. Anticoagulation may be suggested if the endocarditis patient has vein thrombosis

ANSWER:

(38) According to the studies, anticoagulation therapy;

- A. Increased the cerebrovascular complications
- B. Prevented the growth and propagation of vegetation
- C. Increased the vegetation size

ANSWER:

(39) Which of the following statements is incorrect?

- A. Ischemic stroke in patients who received anticoagulation was underestimated.
- B. The beneficial effects at least counterbalance the harmful effects of anticoagulation.
- C. There was no increase in the rate of hemorrhagic lesions in the patients who received anticoagulation therapy.

ANSWER:

(40) The studies show that anticoagulation was beneficial;

- A. Once antimicrobial therapy had begun
- B. When the patients received warfarin before diagnosis
- C. For the patients with non native valve

ANSWER:

(41) Which of the following statements is incorrect?

- A. Patients suspected for stroke should continue with anticoagulation therapy
- B. Patients with pathogens such as *Candida* spp should suspend anticoagulation therapy
- C. Anticoagulation therapy for the sole purpose of stroke prevention is not advised for the patients with newly diagnosed endocarditis.

ANSWER:

(42) Low-molecular weight heparin can be given if;

- A. Surgery is considered
- B. Surgery is not anticipated
- C. In both the cases

ANSWER:

Test No: 24

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Mr. Gwalather. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. Gwalather

Age : 44

Symptoms & disease : skin lesion

Patient's description of symptoms: has had a skin lesion for the past twelve months, initially it was suspected to be a (1)

: no pain or bleeding

: regular smoker, drinks very rarely

: job involves putting (2) break the ground

Family history of illness : no family history of prostate cancer, kidney cancer or any other illness.

Medical history : had (3)

Medications : takes (4) occasionally for back discomfort

Allergies : none

Physical examination : blood pressure is 144/66, weight 177 pounds & heart beat rates and rhythm are regular, has a (5) on penis that is apparent another (6) mildly raised. testicles are bilateral & descended without masses.

Impression : developed (7) called (8) caused by

: (9) etiology is unknown.

: most likely (10)

Further treatment : application of (11) on the lesion for a period of one month

: (12) for the genital warts

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mrs. Gregorius. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : (13)

Age : 38

Symptoms & disease : abdominal pain

Patient's description of symptoms: severe abdominal pain and (14)

: is intolerant to fatty foods & urine is dark colored.

: get chills and (15)

: feels relieved when (16)

: smokes 1 pack a day but never drinks

: has symptoms of (17)

Diagnosis : MRI report is positive for (18) without (19)

: Laboratory studies shows (20) and elevated white blood cells.

: Heart rate and rhythm is regular, without any murmur or gallop

: (21) are of high pitch

: (22) are normal in color, touch and temperature.

: no (23) are noted. Range of motion is normal.

Further treatment : (24) with intraoperative cholangiogram.

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at question 25

Extract 1

(25) You hear a monologue by a physician explaining to his staff about *Balantidium coli*.

Which of the following is pathogenic to humans?

- A. Ciliate phylum
- B. *Balantidium coli*
- C. Ciliate alveolates

ANSWER:

(26) You hear a monologue by a physician explaining to his nurse about Hansen's disease.

Which of the following statements is correct?

- A. Hansen's disease is a highly contagious disease.
- B. The disease can result in crippling of feet and hands even after treatment.
- C. Corneal ulcers can also occur due to this disease.

ANSWER:

(27) You hear a physician discussing Japanese Encephalitis and its risk factors.

Which of the following statements is correct?

- A. Japanese encephalitis has a 50% mortality ratio.
- B. Only a bite from the infected mosquito can cause the Japanese encephalitis disease.
- C. One out of four patients with this disease have a permanent disability.

(28) You hear a physician talking about Epilepsy and seizures.

Which of the following statements is incorrect?

- A. Epilepsy is diagnosed only after a couple of seizures
- B. Seizures are the symptoms of epilepsy
- C. Focal seizures affect both sides of the brain

ANSWER:

(29) You hear a physician talking about Lyme disease and its consequences.

Lyme disease is often diagnosed by;

- A. Laboratory testing
- B. Erythema migrans

C. Headache, fever & fatigue

ANSWER:

(30) You hear a physician explaining to his nurse about Omsk Hemorrhagic fever.

Which of the following is a narrow-skulled vole?

A. Ondatra zibethica

B. Microtus gregalis

C. Arvicola terrestris

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the doctor's lecture on Coronary Artery Disease.

You have 90 seconds to read questions 31 to 36

(31) Which of the following statements is incorrect?

A. Atheromatous plaques accumulate within the walls of myocardium.

B. Atheromatous plaques blocks the blood supply to the myocardium.

C. Coronary artery disease is not the only cause of coronary heart disease.

ANSWER:

(32) Which of these statements is incorrect?

A. Patients remain with no symptoms of coronary artery disease for decades.

B. Acute myocardial infarction is the final symptom of coronary artery disease

C. The first onset of acute myocardial infarction occurs during the initial stage of atheromatous plaque accumulation.

ANSWER:

(33) According to the prevailing trend in the US;

A. 50 percent of the healthy male population of 40 years have developed coronary artery disease.

B. One third of the healthy male population over 40 years have developed coronary artery disease.

C. Coronary artery disease is the most common reason for the death of people over 20 years of age.

ANSWER:

(34) According to the Guinness book of records, the region with most occurrences of this disease is;

A. Masai of Africa

B. United States

C. Northern Ireland

ANSWER:

(35) Patients with severe coronary artery disease have the signs of;

- A. Chronic coronary ischemia
- B. Obstruction of the lumen
- C. Flash pulmonary edema

ANSWER:

(36) Which of the following condition is irreversible?

- A. Flash pulmonary edema
- B. Myocardial infarction
- C. Myocardial ischemia

ANSWER:

Extract 2

Questions 37 to 42

You hear the doctor giving a lecture on different types of viruses and their impacts.

You have 90 seconds to read questions 37 to 42

(37) Which of the following viruses no longer exists in nature?

- A. Molluscum contagiosum
- B. Variola
- C. Monkeypox virus

ANSWER:

(38) Which of the following viruses is not a parapoxvirus?

- A. Cowpox virus
- B. Pseudocowpox virus
- C. Bovine papular stomatitis virus

ANSWER:

(39) Which of the following viruses infects immunodeficient patients?

- A. Molluscum contagiosum
- B. Pseudocowpox virus
- C. Bovine papular stomatitis virus

ANSWER:

(40) Which of the following viruses is of yata poxvirus genus?

- A. Bovine papular stomatitis virus
- B. Orf virus
- C. Tanapox virus

ANSWER:

(41) The virus genus listed by World Organizations for Animal Health as significant animal diseases is;

- A. Parapoxviruses genus

B. Capripox Viruses genus

C. Yata poxviruses

ANSWER:

(42) The virus that was used as a pest control to eradicate feral European rabbits is;

A. Shope fibroma virus

B. Haré fibroma virus

C. Myxoma virus

ANSWER:

Test No: 32

PART A

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient. For questions 1 to 12, complete the following notes with a word or short phrase.

Patient : Daniel

Age : 37

Symptoms & disease : Asthma, cholesterol, high blood pressure, joint pain, back pain, foot and ankle

pain & swelling on right leg and foot.

Patient's description of symptoms:

has asthma, difficulty in walking even ten steps. weight is 344 pounds.

has high cholesterol and high blood pressure, joint pain, back pain, foot

and ankle pain and swelling on leg and foot.

has sleep apnea & snoring.

he is a diabetic patient & has hemorrhoids.

pursuing (1)

smokes but stopped drinking a year back

Past medical history : (2)

Family history of illness : All family members have obesity, heart disease, and diabetes and negative for (3)

Food habits : eats bacon, eggs, and cheese, cheeseburgers, fast food four times a day

Medications : Diovan, (4)

Allergies : none

Physical examination : cranial nerves II-XII are intact. Neck is soft and supple.

Has positive (5)

Heart is regular rhythm and rate.

His abdomen is soft.

has (6)

Further treatment : (9) gastric bypass.

Impression : bariatrics

Further diagnosis : upper endoscopy, (7) thyroid function tests, LFTs,
(8) and fasting blood sugar.

Complications : infection, bleeding, (10) deep venous thrombosis, leakage from
the (11) and possible (12)

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mr. Andrews. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : (13)

Age : 6

Symptoms & disease : shortness of breath

Patient's description of symptoms:

: gets shortness of breath with vigorous play and exercise

Gets tired faster

: no cough, wheezing or chest congestion

: takes a long period to catch her breath after running race

Past medical history : she was in (14) after birth for three months

Family history of illness : none

Medications : none

Allergies : none

Physical examination : pulmonary function test shows premature ventricular contraction is 1.21 liters

that is 77% of predicted. FEV1 was 1.19 that is 81 % of predicted.

(15) that is 82% of predicted.

Post bronchodilator, no change in the forced vital capacity or FEV1.

had a 10% improvement in the peak expiratory flow up to 195 liters per minute

(16) is 25-75% increased to 2.5 liters per second.

which is a 28% improvement : Her (17) as measured by the forced vital capacity and FEV1 and

her flows are in the normal range, has some (18)

: chest x-ray shows normal.

Impression : (19) exertion, etiology unknown.

May be reactive airways disease be a potential cause.

(20) and infectious.

Further treatment : (21) 2 puffs via InspirEase every four hours and

15 minutes prior to (22)

(23) daily for rhinitis symptoms,

(24) every six hours for significant nasal congestion.

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

You hear a discussion between a nurse and a physician explaining about ingredients used in a vaccine. (25)

What is the use of albumin in vaccines?

- A. Used to deactivate bacteria or virus
- B. Used as a preservative
- C. Used as a suspending fluid

Extract 2

You hear a discussion between a nurse and a physician explaining about Vancomycin-resistant Enterococci. (26)

Which of the following diseases is also called as sepsis?

- A. Abscesses
- B. Bloodstream infection
- C. Endocarditis

Extract 3

You hear a discussion between a nurse and a physician explaining about the causes of Chapare hemorrhagic fever. (27)

Which of the following statements suits best with this extract?

- A. Chapare virus is from Arenaviridae family.
- B. There was a massive epidemic of Chapare hemorrhagic fever in bolivia.
- C. The disease is mainly caused by person-to-person transmission through aerosolization.

Extract 4

You hear a dialogue between two physicians discussing about Taeniasis. (28)

Cysticercosis is caused by;

- A. Taenia saginata
- B. Taenia asiatica
- C. Taenia solium

Extract 5

You hear a monologue by a physician briefing about rickettsiosis. (29)

Rickettsialpox is caused by

- A. Rickettsia akari
- B. Rickettsia philippi

C. Rickettsia parkeri

Extract 6

You hear a dialogue between two physicians discussing about healthcare-associated infections. (30)

Which of the following statements is incorrect?

- A. Surgical site infections at healthcare settings are caused by Klebsiella bacteria.
- B. Klebsiella bacteria mainly infects the intestines in human beings.
- C. Klebsiella bacteria develops antimicrobial resistance.

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the discussion between a doctor and nurse on the symptoms, signs and causes of vulvovaginal candidiasis infection.

You have 90 seconds to read questions 31 to 36

Which of the following is not a symptom of vulvovaginal candidiasis infection? (31)

- A. Pruritus
- B. Dyspareunia
- C. Internal dysuria

Which of the following is complicated candidiasis? (32)

- A. Non albicans candidiasis
- B. Sporadic vulvovaginal candidiasis
- C. Candida albicans

Which of the following is not a sign of vulvovaginal candidiasis ? (33)

- A. Vulvar edema
- B. Fissures
- C. Vulvar pruritus

Which of the following methods improves the visualization of mycelium and yeast during diagnosis? (34)

- A. Wet preparation
- B. 10% KOH preparation
- C. Gram stain

Which of the following statements is correct? (35)

- A. Identifying Candida by culture without any signs or symptoms is an indication for treatment.
- B. Vaginal cultures for Candida should be considered for patients with negative wet mounts but existing symptoms or signs.
- C. Postcoital testing for yeast is the approved method by Food & Drug Administration.

Which of the following is not one of the over-the-counter intra vaginal agents? (36)

- A. Butoconazole 2% cream
- B. Miconazole 200 mg vaginal suppository

C. Clotrimazole 2% cream 5g

Extract 2

Questions 37 to 42

You hear the doctor giving a lecture on colon polyps and its treatment.

You have 90 seconds to read questions 37 to 42

Which of the following types of polyps are non-cancerous (37)

A. Adenomas polyps

B. Hyperplastic polyps

C. Malignant polyps

Gardner syndrome is caused by; (38)

A. Over eating of red meat

B. Inadequate fiber in diet

C. Genetic conditions

Injecting a liquid underneath the polyp is a procedure in; (39)

A. Colonoscopy

B. Proctocolectomy

C. Laparoscopy

Which of the following procedures is used for large polyps? (40)

A. Polypectomy

B. Proctocolectomy

C. Laparoscopy

The method used for cancerous polyps is; (41)

- A. Polypectomy
- B. Proctocolectomy
- C. Laparoscopy

Usually, a proctocolectomy is performed for; (42)

- A. Smaller polyps
- B. Familial polyps
- C. Larger adenomas polyps

Test No: 6

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Tainatongo. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Tainatongo

Age : 36

Symptoms & disease : Allergies

Patient's description of symptoms:

intolerance to grass allergies, (1)

no anaphylaxis or angioedema

Past medical history : when the patient was under dialysis due to renal failure six months back, had an

: acute event of (2) etiology uncertain.

: diagnosis results showed allergic reaction was due to (3) for treating

: cellulitis dialysis shunt infection.

Family history of illness : family members have severe heart disease, carcinoma, and food allergies.

Medications : taking (4) for controlling blood pressure, (5) , Lovaza, & Dialyvite.

Previous treatments : corticosteroid therapy and antihistamine therapy and monitoring.

Allergies : Heparin causes (6)

Physical examination : blood pressure 128/78, pulse 70, temperature is 97.8, weight is 207 pounds, and height is 5 feet 7 inches.

Impression : (7)

Further diagnosis : (8) test, to investigate specific (9) to determine the substances a subject is allergic to.

Further treatment : further treatment and medications upon the test results

: stop further usage of (10)

: (11) in the event of (12) or allergic reaction or sensation of impending allergic reaction

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Ndamukong. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Ndamukong

Age : 29

Symptoms & disease : Toothache

Patient's description of symptoms: has multiple issues with teeth due to severe dental disease.

had many of his (13)

having severe tooth pain to both (14) for the past three days.

doesn't drink, but (15)

Family history of illness : none

Medications : (16) and Vicodin for (17)

Previous treatments : had removed many of his teeth

Allergies : penicillin and (18)

Physical examination : Temperature 97.9, blood pressure is (19) pulse is 74,
respirations 16, (20) 98% on room air and interpreted as normal

tenderness to (21) gums are normal

no (22) or swelling

no purulent or other discharge noted.

floor of the mouth is normal without any abscess,

no suggestion of Ludwig's syndrome.

Impression : (23) and Multiple Dental Caries

Further treatment : (24) intramuscular

: Teeth Filling

Complications : None

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a nurse and a physician explaining about Nipah virus.

The genus of Nipah virus is;

A. Paramyxoviridae

B. Henipavirus

C. Pteropus

Extract 2

26) You hear a monologue of a physician explaining about the use of Thimerosal in vaccines.

Which of the following statements is correct?

A. Thimerosal contains methylmercury

B. Ethylmercury causes severe side effects to humans

C. Ethylmercury is the most widely used form of organic mercury

Extract 3

27) You hear a discussion between two doctors on adjuvants used in vaccines.

Which of the following statements is correct?

A. Aluminum gels are used in Cervarix vaccine

B. Monophosphoryl lipid A has been used as an ingredient in vaccine since 1930

C. Cervarix doesn't contain aluminum salts

Extract 4

28) You hear a monologue of a physician explaining about Typhus Fevers.

Sylvatic typhus is also known as;

A. Scrub typhus

B. Louse-borne typhus

C. Murine typhus

Extract 5

29) You hear a discussion between two doctors about VX and its effects.

Which of the following statements is correct?

A. Sarin is much more toxic by entry through the skin.

B. Symptoms will start appearing within few seconds of exposure to the liquid form of VX.

C. The least volatility makes the VX as short-term threat as well as long term threat.

Extract 6

30) You hear a monologue of a doctor briefing about Rubella disease.

The vaccine for Rubella is not meant for;

A. Mumps

B. Measles

C. Shingles

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a physician on the topic Amyotrophic lateral sclerosis disease

You have 90 seconds to read questions 31 to 36

31) Which of the following statements is incorrect?

A. Amyotrophic lateral sclerosis is also known as Lou Gehrig's disease, after the famous basketball player who was diagnosed with this condition.

B. The lifespan of the patients with Amyotrophic lateral sclerosis is about 3 to 5 years after the appearance of the symptoms.

C. There is no cure to amyotrophic lateral sclerosis and treatment is aimed to relieve symptoms.

32) Which of the following statements is incorrect?

A. About 20 percent of patients will live 5 years or more after diagnosis,

B. About 50 percent of patients will live for 20 years.

C. just 10 percent of the patients will live for 10 years or more,

33) Which of the following statements is incorrect?

A. About 90 to 95 percent of patients are with sporadic amyotrophic lateral sclerosis

B. About 5 to 10 percent of patients are with inherited amyotrophic lateral sclerosis

C. About 5 to 10 percent of patients are with sporadic amyotrophic lateral sclerosis

34) Higher levels of glutamate secretion occurs due to;

- A. Chemical imbalance
- B. Disorganized immune response
- C. Mishandling of proteins

34) Higher levels of glutamate secretion occurs due to;

- A. Chemical imbalance
- B. Disorganized immune response
- C. Mishandling of proteins

34) Higher levels of glutamate secretion occurs due to;

- A. Chemical imbalance
- B. Disorganized immune response
- C. Mishandling of proteins

35) Which of the following is not one of the early symptom of amyotrophic lateral sclerosis?

- A. Emotional lability
- B. Slurred speech
- C. Abnormal limb fatigue

36) Which of the following is an upper motor symptom?

- A. Muscle atrophy
- B. Twitching
- C. Stiffness

Extract 2

Questions 37 to 42

You hear the doctor giving a lecture on Tests used on biopsy and cytology specimens to diagnose cancer.

You have 90 seconds to read questions 37 to 42

37) Which of following statements suits best with this extract

- A. Adenocarcinomas can produce mucus
- B. mucicarmin stain leaves a pink-red appearance to mucus
- C. Pink-read appearance of mucus is an indication of lung cancer

38) Which of the following statements is incorrect?

- A. Histochemical stain tests can diagnose only different kinds of cancer tumors.
- B. Special stains are used to identify microorganisms.
- C. Some infections cause lumps similar to cancer tumor.

39) Immunohistochemical stains are significant to;

- A. Find out whether the antibodies have been attracted to the cells.
- B. Find out the origin of the cancer.
- C. Find out whether the tumor is cancer or or not

40) Cytometry is used to diagnose the cells from;

- A. Lungs
- B. Colon
- C. Bone Marrow

41) The cells are diploid if;

- A. The DNA amount is abnormal
- B. The DNA amount is normal,
- C. The cancer grow and spread aggressively

42) The S-phase fraction measurement in cytometry test will measure;

- A. Size of the cancer cell S-Phase
- B. Size of the cancer tumor in S-Phase
- C. Amount of cells in S-Phase

Test No: 7

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Sedef Dagli. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Sedef Dagli

Age : 48

Symptoms & disease : palpitations

Patient's description of symptoms: has a nine year history of occasional palpitations. Symptom occurs up to four times a year. palpitations continues for one hour or more yesterday was the last occurrence feeling of a (1) before her vision she didn't lose consciousness a (2) when she was walking with dogs and the second time it occurred while working on computer.

Allergies : (3)

Family history of illness : none

Past medical history : had (4) complicated by (5) from a neoprene cast.

Physical Examination : pupils are reactive. Sclerae anicteric. Mucous membranes are moist. Neck veins not distended. No bruits. Lungs are clear. Cardiac exam is regular without murmurs, gallops, or rubs. Abdomen is soft without guarding, rebound masses, or bruits. (6) No edema. Strong and symmetrical distal pulses.

Diagnosis : (7) CT scan showed no evidence of pulmonary embolus. Two-dimensional echocardiogram shows no evidence of clinically significant (8)

: A (9) shows sinus rhythm with normal axis and intervals. no evidence of preexcitation. Lab reports show No evidence of myocardial injury.

Impression : episodic palpitations and (10)

Further treatment : outpatient workup suggested. (11) should be obtained. to visit again upon completion of that study.

: suppressive medication (12)

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Dora Nkem Akunyili. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mrs. Dora Nkem Akunyili

Age : 36

Symptoms & disease : uncontrolled blood pressure post Cesarean section delivery.

Patient's description of symptoms: uncontrolled blood pressure recently she had a Cesarean delivery no chest pain or shortness of breath having (13)

Medications : (14) were discontinued. Started on (15) thrice a day, and (16) twice a day, (17) and insulin supplementation.

Past medical history : (18) gestational diabetes mellitus

Physical Examination : Pulse of 86, (19) afebrile and respiratory rate 16 per minute. (20) are flat.

Diagnosis : echocardiogram shows (21) with (22) BUN and creatinine within normal limits.

Impression : (23) status post delivery with Cesarean section with uncontrolled blood pressure. Borderline gestational diabetes mellitus.

Further diagnosis : echocardiogram for assessment of (24)

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a doctor and nurse about the complications are expected at a later stage following heart attack.

In which of the following complications the lining of the heart becomes inflamed?

- A. Angina
- B. Aneurysm
- C. Pericarditis

ANSWER:

Extract 2

26) You hear a discussion between a doctor and nurse about uterine fibroids.

If a fibroid that formed within in the uterus with a stalk-like growth, it is called;

- A. An Intramural fibroid
- B. A Pedunculated submucosal fibroid
- C. A pedunculated subserosal fibroid

ANSWER:

Extract 3

27) You hear a discussion between a doctor and nurse about acquired digital fibrokeratoma.

In which type of the acquired digital fibrokeratoma, the tumors appear tall?

A. Type II

B. Type I

C. Type II

ANSWER:

Extract 4

28) You hear a discussion between a doctor and nurse about pelvic organ prolapse.

Which of the following types of prolapse involves the descent of anterior vaginal wall and urethra?

A. Cystourethrocele

B. Uterovaginal prolapse

C. Urethrocele

ANSWER:

Extract 5

29) You hear a discussion between a doctor and nurse about hematuria.

Which type of hematuria is caused due to hereditary nephritis?

A. Infective hematuria

B. Renal hematuria

C. Iatrogenic hematuria

ANSWER:

Extract 6

30) You hear a discussion between a doctor and nurse about types of collagen and associated disorders.

Which of the following types of collagen is associated with vitreous humour development?

A. Type II

B. Type IV

C. Type III

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1**Questions 31 to 36**

You hear the discussion between a senior doctor and junior doctors about Volvulus.

You have 90 seconds to read questions 31 to 36

31) In an organoaxial volvulus, the stomach rotates along

A. The path between the pylorus and the cardia.

B. Pathway between the lesser and greater curvatures of the stomach

C. Along its short axis

ANSWER:

32) Which of the following conditions causes Ischemia?

- A. Midgut volvulus
- B. Mesenteroaxial volvulus
- C. Organoaxial volvulus

ANSWER:

33) A corkscrew sign can be seen in the imaging of;

- A. Organoaxial volvulus
- B. Midgut volvulus
- C. Mesenteroaxial volvulus

ANSWER:

34) Division of the tissue that creates an attachment between cecum and abdominal wall may be required in;

- A. Sigmoidal volvulus
- B. Cecal volvulus
- C. Midgut volvulus

ANSWER:

35) A coffee bean sign can be seen in the imaging of;

- A. Sigmoidal volvulus
- B. Cecal volvulus

C. Midgut volvulus

ANSWER:

36) Distended abdomens can be seen in the patients with;

A. Cecal volvulus

B. Midgut volvulus

C. Sigmoidal volvulus

ANSWER:

Extract 2

Questions 37 to 42

You hear the discussion of a physician with junior doctors on refractive error.

You have 90 seconds to read questions 37 to 42

37) Which of the following are the photoreceptors?

A. Cornea

B. Cone cells

C. Maculae

ANSWER:

38) Cornea may be bulged more than usual in;

A. Presbyopia

B. Hypermetropia

C. Myopia

ANSWER:

39) Which of the following statements is correct?

A. Hypermetropia occurs when the light rays are refracted too much

B. The cornea of the patient with hypermetropia may be flatter than usual

C. The eyeball of the patient with hypermetropia may be too long than usual

ANSWER:

40) The rays converge to a spot in front of the retina in the patients with;

A. Myopia

B. Hypermetropia

C. Presbyopia

ANSWER:

41) Focus beyond retina is caused in;

A. Hypermetropia

B. Astigmatism

C. Presbyopia

ANSWER:

42) Light rays are scattered and come to focus at different spots on the retina in the patients with;

- A. Presbyopia
- B. Astigmatism
- C. Hypermetropia

ANSWER:

Test No: 8

In this part of the test you hear two different extracts. In each extract, a Healthcare Professional is talking to a patient. For questions 1 to 24 complete the notes with the information you hear.

Extract 1: Questions 1 to 12

You hear a physician talking to a new patient called Bernardito. For questions 1 to 12, complete the following notes with a word or short phrase

You now have thirty seconds to look at the notes.

Patient : Bernardito

Feeling : (1) and severe pain

For the past two months : stomach hurts after every meal

Patient's description of symptoms: the pain persists even during the nights

: didn't eat any heavy food for the past two months

: pain only fleetingly

: it hurts every time while eating food

: eats a lot of (2) at home

: pain moves across the (3)

: feels a (4) while burping

: pain increases while lying down

: eats no spicy food

: bowel is (5)

: no blood in bowel movement

: feeling a (6) while having orange juice

Initial treatment : takes Alka Seltzer (7) and Tylenol regularly

Further treatment : examine (8) for any kind of parasites.

: diagnosis of upper (9) through X-rays and (10)

: X-ray test or an ultrasonic study of (11)

: (12) if the pain continues after having some antibiotics

Extract 2: Questions 13 to 24

You hear an optometrist talking to a patient called Dominika. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Dominika

Reason for the referral : a suspected case of (13)

Occupation : (14) glaucoma

(14) Chief Accountant

History of condition: first experienced (15) back

: having a family history

: (16) is thicker than the usual

Initial diagnosis : (17) and OCT

Patient's description of condition: appearance of a few black, (18) before the eyes that don't disappear even after closing the eyes.

Information given : the eyes of the patient are affected by floaters.

: floaters may become very (19) and affect the eyesight & in such cases, a surgical procedure called (20) may be suggested to remove floaters from the (21)

: intake of vitamins to improve the eyesight and reduce the (22)

23) : to take a Vitamin A supplement that includes selenium, and DHA

: include green leafy vegetables like spinach, kale, and (24) in your meals.

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at question 25

25) You hear a physician explaining Micro Laparoscopic Pain Mapping procedure to the nurse.

This extract concludes that;

- A. Further research is required on this issue
- B. A placebo is always safe though it is less effective than antidepressants
- C. Antidepressants are more efficacious

ANSWER:

26) You hear a physician explaining the issues involved in treating lower back pain

Which of the following statements best suits this extract?

- A. Most of the lower back pain cases are unrelated to particular identifiable spinal abnormalities.
- B. The impacts of lower back pain are extreme in low-income and middle-income countries.
- C. Recommendations are mainly based on the trials exclusively from high-income countries.

ANSWER:

27) You hear a doctor explaining to the nurses about the growth hormone test.

The growth hormone reserve is defined by the peak serum concentration after stimulating with;

- A. Clonidine
- B. Secretagogue
- C. Arginine

ANSWER:

28) You hear the announcement of a new milestone in cancer treatment.

A genetically engineered protein cell is better known as;

- A. A Vascular Endothelial Growth Factor
- B. A carcinogenic cell
- C. A cancer tumor

ANSWER:

29) You hear a physician explaining how to treat an intermittent explosive disorder.

Which one of the following methods can cure the intermittent explosive disorder?

- A. Anticonvulsant mood stabilizers

- B. Antidepressants
- C. Cognitive exercises

ANSWER:

30) You hear a doctor briefing the junior doctors about trigger point injection.

A Trigger Point Injection is given when the muscle spasm doesn't respond to;

- A. Corticosteroids
- B. Muscle relaxants
- C. Local anesthetic medications

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work

For questions, 31 to 42 choose the answer (A,B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now look at extract one.

Extract 1

Questions 31 to 36

You hear a medical podcast on the Guidelines for Coping With Prader-Willi Syndrome.

You have 90 seconds to read questions 31 to 36

31) Which one of the following is not one of the complications of Prader-Willi Syndrome?

- A. Hyperplasia

B. Deletion of chromosome 16

C. Damage to the two primary areas of the brain

ANSWER:

32) Weak muscle tone is also known as;

A. Hypertonia

B. Hyperplasia

C. Hypotonia

ANSWER:

33) Prader-Willi Syndromes also develops;

A. Type 2 diabetes

B. Type 3 diabetes

C. Type 1 diabetes

ANSWER:

34) Which of the following is not a distinctive facial feature of Prader-Willi Syndrome

A. Triangular mouth

B. Small feet and hands

C. Almond-shaped forehead

ANSWER:

35) Which of the following is the suitable treatment to improve the speech of the patient?

A. Physical therapy

- B. Growth hormone test
- C. Medications of reuptake inhibitors

ANSWER:

36) Who can treat the patients having trouble getting their eyes to focus together?

- A. Optometrist
- B. Ophthalmologist
- C. Ophthologist

ANSWER:

Extract 2

Questions 31 to 36

You hear the guidelines given by the physician on how to cope with Prader-Willi Syndrome.

You have 90 seconds to read questions 37 to 42

37) Which of the following statements is correct?

- A. Rejection of transplant is reversible if diagnosed early.
- B. Immunosuppressant results in severe side-effects.
- C. Causes of a chronic rejection are not yet identified.

ANSWER:

38) Which one of the following is not one of the side-effects of immunosuppressant?

- A. Low blood pressure
- B. Cancer formation

C. Weight gain

ANSWER:

39) Which of the following vaccines is not suitable after the kidney transplant?

A. Haemophilus influenzae B

B. Nasal influenza vaccine

C. Diphtheria-pertussis-tetanus

ANSWER:

40) Which of the following vaccines should be given before traveling?

A. Hepatitis A

B. Hepatitis B

C. Pneumovax

ANSWER:

41) A flu shot can be given;

A. After five years of transplant

B. Yearly

C. After six months of transplant

ANSWER:

42) Which of the following cancer types doesn't develop in women?

A. Cervical cancer

B. Prostate cancer

C. Colon cancer

ANSWER:

Test No: 10

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Bryan Harris. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Bryan Harris

Age : 42

Symptoms & disease : several hypergranulation tissue developed from previous wound

Patient's description of symptoms: he had a traumatic injury to his left posterior last year. got hit from a boat while he was in the water. had an extensive surgery. still having an (1) had full thickness (2) close to defect in his posterior thigh. In several areas along the graft site and low in the leg, there are several hypergranulation tissue developed.

: no bleeding

Past medical history : (3)

Medications : Cipro and (4)

Family history of illness : maternal grandmother had (5) father had prostate cancer, and he has having heart disease and diabetes.

Diagnosis : Cardiology reports are regular. There is no (6)

There is no murmur. Abdomen is soft. It is nontender.

There is no mass or organomegaly.

: right lower extremity is unremarkable. Peripheral pulse is good.

: left lower extremity is significant for the (7)

: of a large defect in the posterior thigh, which is nearly healed.

: Hypergranulation tissue both on (8)

: one small area right essentially within the graft site, and there is

: one small area (9) There is an external fixation

: on that (10) The pin sites look clean.

Impression : several multiple areas of hypergranulation tissue on the left posterior leg associated with a (11)

Further treatment : series of treatment with (12) of these areas till these are closed

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Thomas Andrews. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Thomas Andrews

Age : 52

Symptoms & disease : hypertension, chronic intermittent bipedal edema, and recurrent leg venous ulcers.

Patient's description of symptoms: patient with hypertension, chronic intermittent bipedal edema, and recurrent leg venous ulcers. had a (13) for nonhealing right ankle stasis ulcer.

: doesn't drink or smoke

: No nausea, vomiting or diarrhea

Past medical history : hypertension, (14) [] in 2016 for abdominal obstruction, (15) [] in 2017, chronic intermittent bipedal edema, venous insufficiency, chronic recurrent stasis ulcers.

Medications : Primaxin, (16) [] clonidine, furosemide, potassium chloride, lisinopril, metoprolol, ranitidine, (17) [] amlodipine, zinc sulfate, Lortab, multivitamins with minerals.

Allergies : none

Diagnosis : There is (18) [] involving the distal calf of both legs. There is an open wound on the (19) [] measuring 9 x 5cm with minimal serous drainage. Periwound is hyperpigmented with a hint of (20) [] to the medial aspect, distal third of the right lower leg. There is warmth, but minimal tenderness on palpation of this area. There is also a wound on the right lateral malleolar area measuring 4 x 3 cm, another open wound on the left medial malleolar area measuring 7 x 4 cm. (21) []

: Laboratory results show white blood cell count is 5.8 with (22) [] H & H 11.3/33.8, and platelet count 176,000. BUN and creatinine 9.2/0.52. Albumin 3.6, AST 25, ALT 9, alk phos 87, and total bilirubin 0.6.

: Chest x-ray shows chronic bibasilar subsegmental atelectasis likely related to elevated hemidiaphragm secondary to chronic ileus.

Impression : multiple previous wound cultures positive for (23) [] Enterococcus, and Stenotrophomonas. Fevers. Right leg/ankle cellulitis. Chronic recurrent bilateral ankle venous ulcers. Hypertension.

Further diagnosis & Treatment : 2 sets of blood cultures. Injection with (24) []

: MRI of the right ankle to check for underlying osteomyelitis. Follow up result of wound [] cultures. Additional treatment and medications are upon follow-up.

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a doctor and nurse about common types of neuropathic pain.

Pain caused by an outbreak of shingles is;

- A. Pudendal neuralgia
- B. Postherpetic neuralgia
- C. Sciatica

ANSWER:

Extract 2

26) You hear a discussion between a doctor and nurse about Bronchodilators Used to treat chronic obstructive pulmonary disease.

Which of the following bronchodilators works by blocking the neurotransmitter?

- A. Methylxanthines
- B. Anticholinergic
- C. Beta-agonists

ANSWER:

Extract 3

27) You hear a discussion between a doctor and nurse about pancreatic neuroendocrine tumors.

Which of the following tumors is not malignant?

- A. Glucagonoma
- B. Gastrinoma
- C. Insulinoma

ANSWER:

Extract 4

28) You hear a discussion between a doctor and nurse about melasma and different types of melasma.

Which of the following statements is correct?

- A. The epidermal melasma is characterized by presence of melanophages.
- B. Melasma appears only on face
- C. The dermal melasma is defined by the presence of excess melanin.

Extract 5

29) You hear a discussion between a doctor and nurse about possible causes of arthritis.

Which of following conditions is developed when the immune system dysfunctions?

- A. Osteoarthritis
- B. Reactive arthritis
- C. Rheumatoid arthritis

ANSWER:

Extract 6

30) You hear a monologue of a physician on granulomas.

Which of the following statements is incorrect?

- A. The chronic activation of the metabolic sensor is responsible for the granulomas formation
- B. Granulomas are tissue nodules of immune cells that can protect many organs.
- C. Target Of Rapamycin inhibitors belong to a group of drugs that are licensed for clinical use

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a physician on colectomy surgery.

You have 90 seconds to read questions 31 to 36

31) What is an ileostomy?

- A. Removal of rectum in the surgery
- B. A procedure to dispose the stool
- C. Sewing of terminal ileum together

ANSWER:

32) The last part of the small intestine is sewn together in;

- A. Proctocolectomy surgery
- B. Total Colectomy surgery
- C. J-Pouch surgery

ANSWER:

33) Rectum is not removed in;

- A. Proctocolectomy
- B. Total colectomy
- C. Partial colectomy

ANSWER:

34) Rectum is not removed in;

- A. Ileoanal Anastomosis
- B. Total colectomy
- C. Partial colectomy

ANSWER:

35) The surgery that is not done for the patients with ulcerative colitis is;

- A. Partial colectomy
- B. Total colectomy
- C. Hemicolectomy

ANSWER:

36) Which of the following surgeries doesn't require a stoma?

- A. Partial colectomy
- B. Hemicolectomy

C. Total colectomy

ANSWER:

Extract 2

Questions 37 to 42

You hear the monologue of a physician giving a lecture on ankle fractures.

You have 90 seconds to read questions 37 to 42

37) A surgery will be required in lateral malleolus fracture if;

- A. The fibula fracture is within 4 centimeters of the end of the bone
- B. The inner part of the ankle is injured
- C. The fracture involves lateral malleolus

ANSWER:

38) Which of the following statements is correct?

- A. Medial malleolus is also called tibia
- B. Lateral malleolus fractures involve only tibia.
- C. An isolated lateral malleolus fracture is very rare compared with an isolated medial malleolus fracture.

ANSWER:

39) Which of the following fractures can lead to arthritis?

- A. Trimalleolar ankle fracture
- B. Bimalleolar Equivalent Fracture
- C. Bimalleolar ankle fracture

ANSWER:

40) Which of the following fractures involves only fibula?

- A. Bimalleolar equivalent fracture
- B. Posterior malleolus fracture
- C. Medial malleolus fractures

ANSWER:

41) Which of the following ankle fractures doesn't involve both fibula and tibia?

- A. Maisonneuve fracture
- B. Bimalleolar equivalent fracture
- C. Posterior malleolus fracture

ANSWER:

42) The impact of the fracture damages the syndesmosis in;

- A. Bimalleolar Equivalent Fracture
- B. Maisonneuve Fracture
- C. Posterior Malleolus Fracture

ANSWER:

Test No: 12

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Mr. Chong Walton. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. Chong Walton

Age : 48

Symptoms & disease : severe pain on left knee and stiffness

Patient's description of symptoms: a patient with severe bilateral knee degenerative joint disease, left greater than right, with significant pain and limitations because of both. had (1) two times within the duration of past eighteen months. long-standing conservative course for these including nonsteroidals, narcotics, and injections. wants to go for a total joint surgery on the left side has arthritic complications including multiple back surgeries for spinal stenosis including (2) he was working as a driver with a beverage company, but now he has retired due to his condition

Past surgeries : (3) on the left. Baker's cyst. Colon cancer removal. Bilateral knee scopes. Right groin hernia. (4) Status post colon cancer, second surgery.

Medications : Ambien 12.5 mg bedtime. (5) Lisinopril 10 mg daily. Demerol for pain.

Allergies : (6) cause rashes; ibuprofen causes his throat to swell, Fortaz (7)

Diagnosis : Musculoskeletal examination of left knee reveals a (8) extension, 126 flexion. Extensor mechanism is intact. There is mild varus. Has good stability at (9) (10) are negative Has good muscle turgor. Dorsalis pedis pulse 2+. X-rays reveal severe bilateral knee degenerated joint disease with joint space narrowing medially as well as the (11) left greater than right.

Impression : paresthesias down into thighs (12) [] bilateral knee degenerative joint disease. significant back pain, status post lumbar stenosis surgery.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mr. David Goggins. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. David Goggins

Age : 67

Symptoms & disease : frequent nausea and vomiting with an aspiration pneumonia and abdominal discomfort

Patient's description of symptoms: frequent nausea and vomiting with an aspiration pneumonia and abdominal discomfort had an endoscopy which revealed a (13) [] Now he feels anemic. had a CT scan last week that showed (14) [] worrisome for (15) [] bilateral hydronephrosis and multiple liver lesions. Yesterday he had (16) [] and passing flatus and has (17) [] chronic alcohol user, stopped smoking long back

Past medical history : (18) [] history of pneumonia, and aspiration pneumonia, osteoporosis, alcoholism, (19) []

Physical Examination : he is afebrile. Heart rate in the 100s to 120s at times with (20) [] Respiratory rate is 17-20. Blood pressure 130s-150s & 60s-70s. abdomen is distended with tenderness mainly in the upper abdomen but very difficult to localize.

Diagnosis : CT scan shows (21) [] with an enlarged cecum filled with stool and air fluid levels with chronically dilated small bowel.

Further diagnosis : a repeat CT scan to assess it further to see if there is (22) [] versus resolution to further (23) [] and make decisions regarding planning at that time. Since he has frequent desaturations secondary to his aspiration pneumonia, any surgical procedure or any surgical intervention certainly require (24) [] that would then necessitate long-term ventilator care. Decisions on further treatment will be based on the repeat CT scan.

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a doctor and nurse about the cause of glioma.

Which of the following types of glioma involve the cells that provide myelin?

- A. Oligodendroglioma
- B. Ependymoma
- C. Astrocytoma

ANSWER:

Extract 2

26) You hear a discussion between a doctor and nurse about Gaucher's Disease Genetics.

Which of the following mutations affects the infants?

- A. 1 or 2 copies of L444P
- B. N370S
- C. 1 or 2 alleles of L444P

ANSWER:

Extract 4

28) You hear a discussion between a doctor and nurse about hyperelastic skin.

The skin becomes stretchable beyond the normal level, when;

- A. The collagen level is low
- B. There is an increased elastin
- C. The person has Ehlers-Danlos syndrome

ANSWER:

Extract 5

29) You hear a discussion between a doctor and nurse about cancer of unknown primary.

Which of the following type of cancer of unknown primary forms from gland cells?

- A. Squamous cell cancer
- B. Neuroendocrine carcinoma
- C. Adenocarcinomas

ANSWER:

Extract 6

30) You hear a discussion between a doctor and nurse about Sarin Classification.

Which of the following gastric varices leads to greater curvature of the abdomen?

- A. Type 2 - gastroesophageal varix
- C. Type 1 - gastroesophageal varix
- C. Type 1 - Isolated gastric varix

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the discussion between a senior doctor and junior doctors about Pemphigus.

You have 90 seconds to read questions 31 to 36

31) Which of the following statements is correct?

- A. Pemphigus is an autoimmune disease
- B. Pemphigus is a genetic disease
- C. Pemphigus disease can spread person to person

ANSWER:

32) Crusty sores are formed in;

- A. Pemphigus vulgaris
- B. Pemphigus foliaceus
- C. All types of pemphigus diseases

ANSWER:

33) The type of pemphigus that affects the mucous membranes is;

- A. IgA pemphigus

B. Pemphigus foliaceus

C. Pemphigus vulgaris

ANSWER:

34) The disease that affects the scalp is;

A. Pemphigus foliaceus

B. IgA pemphigus

C. Paraneoplastic Pemphigus

ANSWER:

35) Which of the following is a characteristics of Paraneoplastic Pemphigus?

A. Forming crusty sores on the scalp and face

B. Eyelids becoming cut and scarred

C. Affecting mucous membranes

ANSWER:

36) pus-containing bumps are formed in

A. IgA pemphigus

B. Vegetans

C. Paraneoplastic Pemphigus

ANSWER:

Extract 2

Questions 37 to 42

You hear the discussion of a physician with junior doctors on pericarditis.

You have 90 seconds to read questions 37 to 42

37) In acute pericarditis, the pain increases;

- A. During expiration
- B. While sitting
- C. Lying down

ANSWER:

38) Which of the following symptoms is not seen in the patients with chronic pericarditis?

- A. Chest pain
- B. Tiredness
- C. Coughing

ANSWER:

39) Which of the following conditions is caused due to gradual accumulation of fluid within the pericardial cavity?

- A. Chronic pericarditis
- B. Pericardial effusion
- C. Constrictive pericarditis

ANSWER:

40) The condition caused due to thickening of pericardial layers is;

- A. Cardiac tamponade

- B. Pericardial effusion
- C. Constrictive pericarditis

ANSWER:

41) The condition caused when the pericardial fluid volume increases about 80 ml is;

- A. Cardiac tamponade
- B. Pericardial effusion
- C. Purulent pericarditis

ANSWER:

42) The type of pericarditis commonly seen in the patients with Hodgkin's disease is;

- A. Malignancy pericarditis
- B. Traumatic pericarditis
- C. Radiation Pericarditis

ANSWER:

Test No: 13

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Magtanggol. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Magtanggol

Age : 51

Symptoms & disease : diplopia

Patient's description of symptoms: since last year, having double vision when waking up in the morning

: this lasts for one hour.

: when closing his eyes the (1)

: the problem worsened recently

: recently, the object started (2)

: recently developed (3)

: no dysphagia,

: no difficulties in speaking or (4)

issues : no weakness, numbness, tingling or any neurological

: doesn't drink, but smokes

Family history of illness : mother died of a stroke when she was ninety

: father had (5)

Physical examination : BP 124/76 (6) respiratory rate is 20

Diagnosis : MRI report shows a questionable (7) of the medial left - - supraclinoid internal carotid artery.

: no abnormalities on the right side

: blood flow patterns are normal there is no (8)

Impression : developed a condition of (9) or other disorder. right lid
10) left gaze diplopia. possibilities of other (11) horizontal diplopia
in both directions, no vertical diplopia. monocular diplopia.

Further treatment : (12) to treat the aneurysm

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mr. Medehgui. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Medehgui

Age : 80

Symptoms & disease : possible idiopathic (13)

Patient's description of symptoms: twelve months ago she had severe cognitive impairment,
14) and incontinence

: had CSF drainage via a (15)

Medical history : has cervical stenosis had a (16) and instrumented fusion six months back

: patient is unable to walk, using a walker and a supporting assistant to walk.

: memory is worsened

Medications : Aricept 10 mg in the evening, carbidopa 25 mg or levodopa 100 mg three times a day, (17) Colace 100 mg twice a day, finasteride 5 mg once a day, (18) once a day, multivitamin with iron once a day, omeprazole 20 mg once a day, senna 8.6 mg twice a day, (19) as needed, and promethazine 25 mg as needed.

: The (20) shows there is no upgaze

: The down gaze and (21) are intact.

: gait is severely impaired

: ventricles appear larger

: The (22) was previously about 5.5 cm and now it is 6 cm. The 3rd ventricular span is 15 mm.

Impression : idiopathic normal pressure hydrocephalus

: possibility of (23)

: incontinence and urinary urgency

Further treatment : (24)

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at question 25

25) You hear two doctors discussing the new device to ease breathing difficulty in patients with chronic obstructive pulmonary disease.

Which of the following statements best suits this extract?

- A. Reducing the volume of lungs in emphysema patients will help them to breathe more easily.
- B. Shortness of breath is the point when you find it difficult to take a deep breath in.
- C. A new device is to be introduced to the patients to decrease the volume of their lungs.

ANSWER:

Extract 2

26) You hear a doctor explaining to his nurse about Functional Gastrointestinal Disorders

Which one of the following is a severe symptom?

- A. Abdominal distention
- B. Hematochezia
- C. Acid reflux

ANSWER:

Extract 3

27) You hear two doctors talking about the differences between conductive and sensorineural hearing impairment.

Impairment of which of the following part of the ear causes conductive hearing loss?

- A. Cochlea

B. Myringa

C. Vestibulocochlear nerve

ANSWER:

Extract 4

28) You hear a doctor briefing a junior doctor about Eczema.

Which of the following statements is incorrect?

A. Eczema is caused when the inflamed skin retains enough moisture.

B. The disease is aggravated by moisture from sweating or humidity.

C. Stress can also cause eczema.

ANSWER:

Extract 5

29) You hear a doctor's dialogue on the vaccine for hepatitis B virus.

What if the patient doesn't develop a protective antibody titer?

A. Should be vaccinated again.

B. Target titer of 10 international unit or 10 ml should be repeated.

C. The hepatitis B surface antibody titer should be monitored again.

ANSWER:

Extract 6

30) You hear a doctor explaining to his patient about a bone marrow biopsy.

Bone marrow aspiration is taken from;

A. The center bone in the chest called ilium.

B. Pelvic bone.

C. Lower back, near the hip.

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions 31 to 42 choose the answer (A, B, or C) which fit best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the doctor briefing his staff about the pathology report.

You have 90 seconds to read questions 31 to 36

31) Which of the following pieces of information is included in the general information?

A. Special requests made to the pathologist

B. Unique number of the specimen

C. Medical history

ANSWER:

32) Gross description is very short for;

- A. Cytology
- B. Small biopsy
- C. Larger biopsy

ANSWER:

33) The gross description of a mastectomy biopsy of breast cancer will not include;

- A. How many lymph nodes were detected in the underarm area
- B. Particulars of the non-cancer tissues
- C. The extent of invasion to the nearby tissues

ANSWER:

34) The size of the cancer tumor is mentioned in;

- A. Microscopic descriptions
- B. Gross descriptions
- C. Diagnosis

ANSWER:

35) The flow cytometry information is obtained through;

- A. Larger biopsy
- B. Cytology
- C. Microscopic diagnosis

ANSWER:

36) On which part of the pathology report is used to diagnose further?

- A. Microscopic descriptions
- B. Additional notes
- C. Additional diagnosis

ANSWER:

Extract 2

Questions 37 to 42

You hear the doctor giving a lecture to the junior doctors on Lung Carcinoid Tumors.

You have 90 seconds to read questions 37 to 42

37) Tiny blood vessels run through;

- A. Trachea
- B. Alveoli
- C. Bronchioles

ANSWER:

38) The part that protects the lungs is

- A. Pleura
- B. Alveoli
- C. Diaphragm

ANSWER:

39) The muscle that separates the chest from the abdomen is

- A. Pleura
- B. Diaphragm
- C. Alveoli

ANSWER:

40) People living at higher altitudes will have;

- A. A large pleural cavity
- B. Increased lung neuroendocrine cells
- C. A thin diaphragm

ANSWER:

41) Which of the following types of cancer does not grow aggressively?

- A. Small cell lung cancer
- B. Atypical lung cancer
- C. Typical lung cancer

ANSWER:

42) Peripheral carcinoids form;

- A. In the bronchioles toward the outer edges of the lungs

B. In the bronchial walls near the center of the lungs

C. Beyond the lungs.

ANSWER:

Test No: 14

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Mr. Gonsalves. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. Gonsalves

Age : 59

Symptoms & disease : tracheostomy tube removal

Patient's description of symptoms: patient with end-stage chronic obstructive pulmonary disease had a tracheostomy tube placement 3 months before while having

: treatment for acute exacerbation

: now residing in an extended care facility

: requires (1)

: there has been some tenderness with tracheostomy tube &

: difficulty in swallowing

: patient wants the tracheostomy tube to be removed

: regular smoker & was an addict to alcohol, recently
stopped

Past surgeries : Tonsillectomy, (4) cholecystectomy, appendectomy,

(5) and tracheostomy.

Past medical history : Chronic obstructive pulmonary disease, (2) coronary artery disease, myocardial infarction, and (3)

Family history of illness : heart disease, coronary artery disease, hypertension, diabetes mellitus, and (6)

Medications : Prevacid, folic acid, aspirin, (7) Pulmicort, Risperdal, Colace, clonazepam, Lotrisone, Roxanol, Ambien, (8) simethicone, Robitussin, and prednisone.

Allergies : (9)

Physical examination : blood pressure is 110/78, pulse rate is 96, and temperature is 98.6. There is a stable-appearing tracheostomy tube site and the stoma appears to be without signs of infection. The previous incision was vertical in nature and there is no hypertrophic scar formation. No adenopathy noted. No stridor noted.

Impression : end-stage chronic obstructive pulmonary disease with a history of respiratory failure requiring (10) with tracheostomy tube placement.

difficulty in tolerating tracheostomy tubes

secondary to swallow discomfort and neck irritation

history of coronary artery disease, myocardial infarction and (11)

Further treatment : limited bronchoscopy and then (12)

Complications : may have trouble with the area healing or scarring or could end up having an emergent airway situation

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Edward Corey. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. Edward Corey

Age : 60

Symptoms & disease : persistent cough for the past two weeks and some shortness of breath

Patient's description of symptoms: he is a patient with (13) with

prior stent-supported angioplasty

has persistent cough for the past two weeks and some shortness of breath

: he was treated for (14)

: doesn't drink, but smokes regularly

Past medical history : coronary artery disease since 2016 (15) for over 10 years, chronic obstructive pulmonary disease & Hypertension.

Past surgeries : (16) about eight years ago, neck fusion stent-supported (17) to unknown vessel in the heart.

Medications : Aspirin 81 mg daily, (18) Allopurinol 100 mg daily, Levothyroxine 100 mcg a day, Lisinopril 10 mg a day, Metoprolol 25 mg a day, Atorvastatin 10 mg daily.

Diagnosis : Cardiovascular studies normal upstroke, distal pulse symmetrical.

Heart regular with a normal S1 with normally split S2.

There is an (19) Lungs with decreased air entry.

: Echocardiogram shows (20) normal thickening of the left ventricle with mildly dilated ventricle, EF of 40%, (21) and diastolic dysfunction, grade 2.

: Nuclear stress study shows (22) no reversible ischemia identified. Laboratory data shows normal white cells, hemoglobin 11. BUN of 12.1, creatinine of 0.8. Troponin of 0.04. BNP of 5700. Had no syncope.

Impression : cardiomyopathy, (23)

Further treatment : Electrophysiology study is required for ventricular tachycardia.

24) will be determined at a later stage.

To continue metoprolol with a little higher dose of 25 mg twice a day.

To continue atorvastatin.

Increase lisinopril to 20 mg daily to improve blood pressure management.

To take hydralazine 50mg for blood pressure management.

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a monologue by a physician explaining about Lupus disease.

Lupus disease;

- A. Causes the antibodies to act against antigens.
- B. Leads the immune system to act against antibodies.
- C. Causes antibodies to act against the healthy tissues

ANSWER :

Extract 2

26) You hear a discussion between a doctor and a nurse on leukopenia disease.

The white blood cell that can mend the damaged tissue is;

A. Lymphocytes

B. Monocytes

C. Basophils

ANSWER:

Extract 3

27) You hear a discussion between a doctor and a nurse on different stages of gout.

In which of the following gout stages the joints are irritated by calcium phosphate crystals?

A. Pseudogout

B. Intercritical stage

C. Chronic tophaceous stage

ANSWER:

Extract 4

28) You hear a discussion between a doctor and a nurse on different types of gum graft surgery.

Which gum graft surgeries is performed for the individuals with inadequate gums?

A. Pedicle grafts

B. Gingival grafts

C. Connective tissue grafts

ANSWER:

Extract 5

29) You hear a discussion between a doctor and a nurse about medical conditions that cause undigested food to appear in the stool.

In which of the following diseases the patient becomes incapable to digest gluten in grains?

- A. Celiac disease
- B. Crohn's disease
- C. Pancreatic insufficiency

ANSWER:

Extract 6

30) You hear a discussion between a doctor and a nurse about different procedures to detect blood clots.

Which of the following procedures uses catheterization technique?

- A. Endocardiography
- B. Ventilation-perfusion
- C. Angiography

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a physician on the topic blood type classifications

You have 90 seconds to read questions 31 to 36

31) Which of the following statements is correct?

- A. Viruses and bacteria are antigens
- B. Red blood cell antigens are protein molecules
- C. Red blood cells produce antibodies

ANSWER:

32) In which of the following blood groups the plasma does not contain anti-A antibodies?

- A. B group
- B. AB group
- C. A group

ANSWER:

33) What is the criterion that makes the blood type for transfusing to the patient with any blood group?

- A. Having none of A or B antibodies
- B. Having none of A or B antigens

C. Having A antigen and anti-B antibody

ANSWER:

34) In the US 39 percent of the population are with;

- A. A positive blood
- B. RhD-positive blood
- C. O positive blood

ANSWER:

35) Which of the following blood types is considered as 'Universal Donor Type'

- A. O negative
- B. O positive
- C. AB positive

ANSWER:

36) What is a sensitization during pregnancy?

- A. If the antibody from the mother attacks red blood cells of the fetus
- B. If the RhD from the fetus attacks the red blood cells of the mother
- C. If the RhD from the mother attacks the red blood cells of the fetus

ANSWER:

A

Extract 2

Questions 37 to 42

You hear the monologue of a physician giving a lecture on Types of Eczema.

You have 90 seconds to read questions 37 to 42

37) Which of the following types of eczema occurs due to inhalant allergies?

- A. Irritant dermatitis
- B. Allergic contact dermatitis
- C. Atopic dermatitis

ANSWER:

38) What occurs due to poor blood blood circulations in the veins of the legs?

- A. Atopic dermatitis
- B. Stasis dermatitis
- C. Irritant dermatitis

ANSWER:

39) Poison Ivy is;

- A. An irritant dermatitis
- B. Allergic contact dermatitis
- C. Scabies

ANSWER:

40) Tiny blisters on the sides of the fingers or toes and palms or soles are the symptoms of

- A. Fungal infections
- B. Scabies
- C. Pompholyx

ANSWER:

41) Eczema that produces thickened plaques on the shins and neck is;

- A. Lichen simplex chronicus
- B. Seborrheic dermatitis
- C. Dyshidrotic eczema

ANSWER:

42) Oozy rash behind the ears is caused by

- A. Lichen simplex chronicus
- B. Seborrheic dermatitis
- C. Dyshidrotic eczema

ANSWER:

Test No: 16

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Eugeniusz. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Eugeniusz

Age : 12

Symptoms & disease : Fell off from bicycles & having Neck pain

Patient's description of symptoms: fell off his bicycle. He was not wearing a helmet.

There was a (1) He is complaining neck pain.

Family history of illness : none

Medications : none

Allergies : none

Physical examination : his blood pressure 150/75, pulse rate 80, respirations 18, temperature 37.4, (2) on room air. He is moderately obese.

Diagnosis : His neck is symmetric, the trachea is in the midline, and there are no masses. No crepitus is palpated. The thyroid is palpable, not enlarged, smooth, moves with swallowing, and has no palpable masses. Normal respiratory effort. There is no (3) or action by the accessory muscles. Normal breath sounds bilaterally (4) wheezing or rubs.

: The point of maximal impulse is palpable at the (5) No thrills on palpation. (6) No audible S3, S4, murmur, click or rub. (7) No audible abdominal bruits. (8) bilaterally, without audible bruits. Extremities show no edema or (9)

: Gastrointestinal investigation shows no palpable tenderness or masses. Liver and spleen are percussed but not palpable under the costal margins. No evidence for (10) No lymphatic nodes over 3 mm in the neck, axillae or groins. Musculoskeletal test shows normal gait and station. Symmetric muscle strength and normal tone, without signs of atrophy or abnormal movements.

: There is a (11) and one in the occipital scalp, and there are abrasions in the upper extremities and abrasions on the knees. No induration or subcutaneous nodules to palpation.

Impression : has concussion, facial abrasion, (12) and knee abrasions.

Further treatment : to admit the patient today and he will be medicated and under observation for 24 hours.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mr. Gregorius. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. Gregorius

Age : 55

Symptoms & disease : Abnormal stress test with severe chest pain

Patient's description of symptoms: had a markedly abnormal stress test with severe chest pain after 5 minutes of exercise on the standard Bruce with horizontal ST depressions and moderate (13) on stress imaging only.

Allergies : none

Physical examination : his (14) [] today shows mild-to-moderate left main distal disease of 30%, moderate (15) [] with a severe mid-left (16) [] of 99%, and a mid-left (17) [] with normal (18) [] and some mild (19) [] in the right coronary artery with some moderate (20) [] seen in the mid to distal right (21) []

Impression : has (22) [] symptoms, as well as nocturnal angina symptoms, and especially given the severity of the mid left anterior descending lesion, with a markedly abnormal stress test.

Further treatment : Aspirin 325 mg once a day, (23) [] Zocor 40 mg once a day

: (24) [] given tonight.

: transfer the patient for percutaneous coronary intervention

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a monologue by a physician explaining about Gallstones.

Which of the following statements is correct?

- A. Pigment stones are yellow-green in color
- B. Pigment gallstones are made of bilirubin
- C. Patients with cholesterol gallstones will have cirrhosis of the liver, biliary tract infections, and hereditary blood disorders, including sickle cell anemia

ANSWER:

Extract 2

26) You hear a discussion between a nurse and a doctor on Crohn's Diseases.

Crohn's disease that affects the colon and adjacent ileum is;

- A. Ileocolitis
- B. Ileitis
- C. Jejunoileitis

ANSWER:

Extract 3

27) You hear a discussion between a nurse and a doctor on diagnosis methods for endometrial cancer and its stages.

Endometrial cancer is within the pelvic area during;

- A. Stages 1 to 2
- B. Stages 3 & 4
- C. Stages 1 to 3

ANSWER:

Extract 4

28) You hear a discussion between a nurse and a doctor on types of hemorrhoids and their effects.

Which of the following statements is correct?

- A. Internal hemorrhoids are identified by a lump on the surface of the anus.
- B. Pain occurs if the internal hemorrhoid begins to prolapse.
- C. Pain becomes severe when internal hemorrhoid clots.

ANSWER:

Extract 5

29) You hear a discussion between a nurse and a doctor on different categories of chemotherapy drugs.

Navelbine comes under which type of type drug?

- A. Alkylating agents
- B. Plant Alkaloids
- C. Antimetabolites

ANSWER:

Extract 6

30) You hear a discussion between a nurse and a doctor on different types blood disorders.

In which of the following blood disorders bone marrow makes excessive number of red blood cells?

- A. Neutropenia
- B. Polycythemia
- C. Immune thrombocytopenic purpura

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a physician on the topic white blood cell disorders.

You have 90 seconds to read questions 31 to 36

31) Which of the following statements is correct?

- A. Caucasians have less white blood cells
- B. White blood cells decrease as the infant grows
- C. Red blood cells fights infections

ANSWER:

32) Which of the following white blood cells fight parasitic infections

- A. Eosinophils
- B. Lymphocytes
- C. Basophils

ANSWER:

33) Neutrophils fight against;

- A. Fungal infections
- B. Bacterial infections
- C. Viral infections

ANSWER:

34) The white blood cells involved in inflammatory reactions is;

A. Eosinophils

B. Basophils

C. Neutrophils

ANSWER:

35) Which of the following conditions is genetically caused?

A. Autoimmune neutropenia

B. Leukophilia

C. Cyclic neutropenia

ANSWER:

36) Patients with which of the following conditions have recurrent bacterial infections?

A. Severe congenital neutropenia

B. Cyclic neutropenia

C. Autoimmune neutropenia

ANSWER:

Extract 2

Questions 37 to 42

You hear the monologue of a physician giving a lecture on The Different Types of Non-Hodgkin's Lymphoma.

You have 90 seconds to read questions 37 to 42

37) Which of the following statements is correct?

A. More common type lymphoma is T-cell Hodgkin Lymphoma.

B. Hodgkin lymphoma is a large group of diseases.

C. B-cell non-Hodgkin Lymphoma is more common type.

ANSWER:

38) Which of the following statements is incorrect?

A. High-grade lymphoma cells look quite similar from normal cells

B. Low-grade lymphoma cells appear similar to the normal cells

C. High-grade lymphoma cells look multiply gradually.

ANSWER:

39) Which of the following statements is incorrect?

A. Aggressive non-Hodgkin Lymphoma responds better to treatment

B. Low-grade lymphoma often responds better to treatment

C. B-cell lymphoma is the most common low-grade lymphoma

ANSWER:

40) Which of the following type of lymphoma doesn't give rise to many symptoms?

A. Aggressive Non-Hodgkin Lymphoma

B. Indolent non-Hodgkin Lymphoma

C. Diffuse non-Hodgkin Lymphoma

ANSWER:

41) Which of the following statements is correct?

A. Lymphomas originate in the brain is a nodal lymphoma.

B. Lymphomas originate in the stomach is an extranodal lymphoma.

C. Nodal lymphoma never arises only from the lymph nodes.

ANSWER:

42) Which of the following statements is correct?

- A. In diffuse non-Hodgkin Lymphoma, the cells are spread around in spherical clustering.
- B. A high-grade non-Hodgkin Lymphoma appears follicular
- C. Most of the low-grade non-Hodgkin Lymphoma are in spherical clusters.

ANSWER:

Test No: 17

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Hiromichi. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Hiromichi

Age : 54

Symptoms & disease : suffocating feeling and shortness of breath

Patient's description of symptoms: having a suffocating feeling whenever lying flat on back.

now sleeping in an (1)

: gets (2) and shortness of breath.

: no chest pain, no bleeding disorder

Past medical history : (3) hypertension, asthma, and (4)

Family history of illness : brothers had prostate cancer; father had (5) . brothers and sister have diabetes.

Medications : glipizide 5 mg twice a day, (6) Atacand 16 mg daily,

metoprolol 25 mg twice a day, Lipitor 10 mg daily, (7)

(8) Detrol 4 mg daily, Zyrtec 10 mg daily,

(9) one puff twice a day, and

fluticasone spray 50 mcg two sprays daily.

Allergies : none

Diagnosis : Cat scan shows a (10) and there is a small pancreatic lesion on left adrenal node

pancreas shows pancreatic lesion towards the (11) of the pancreas, approximately 1 cm, most likely of cystic nature

: Neoplasm cannot be ruled out

: earlier colonoscopy last year shows three adenomatous polyps.

Impression : left adrenal and pancreatic lesions.

Further treatment : (12) with Radiology and probably at some point there may be a need of operative intervention.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mackenzie. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mackenzie

Age : 45

Symptoms & disease : persistent pain symptoms down back the right leg to knee

Patient's description of symptoms: : Has a three years of history of lung cancer metastasized in both femurs, lower (13)

: had numerous chemotherapy and radiation treatments and just completed a series of 10 radiation treatments for pain relief.

has persistent pain symptoms mostly in low back on the right side, radiating down the back of right leg to knee.

has some (14)

some throbbing pain in the left foot at times.

pain worsens while prolonged sitting in the car, walking or standing

: smokes one pack a day for last 30 years; drinks beer twice a day

Past surgeries : (15)

Medications : Duragesic patch 250 mcg total, (16) iron 240 mg twice daily, Paxil 20 mg daily, (17) daily, and Percocet. (18) to keep my chest port patent.

Allergies : none

Diagnosis : neurological examinations show that reflexes are 2+ in both knees and absent at both ankles. Sensations are decreased distally in the left foot, otherwise intact to pinprick.

: Examination of lumbar spine shows normal (19) with fairly functional range of movement. There is a significant tenderness at (20) and sacroiliac joints that seems to reproduce a lot of your low back and right leg complaints.

: multiple scan reports reveal that abnormal uptake involving the femurs bilaterally. Has increased uptake in the (21)

MRI of the lower hip joints shows (22) in both proximal femurs. Pelvis CT shows a trabecular pattern with healed metastases.

CT of the orbits reveal a small amount of fluid in mastoid air cells on the right.

Impression : small cell lung cancer with metastasis at the lower lumbar spine, pelvis, and both femurs. Symptomatic facet and sacroiliac joint syndrome on the right and chronic pain syndrome.

(23) is probably secondary to the chemotherapy and radiation treatments

Further diagnosis : injection of right sacroiliac and facet joints under fluoroscopy

Further treatment : If the pain is persistent even after injection, can take an extra 50 mcg patch and take a couple of extra Percocet if needed.

stop taking Paxil and to start (24) instead.

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a nurse and a physician explaining about different types of breath sounds.

The abnormal breath sound of a person with a blocked upper airway is;

A. Wheezing

B. Stridor

C. Squawk

Extract 2

26) You hear a monologue by a physician explaining about Heberden's nodes.

Which of the following statements suits best with this extract?

- A. Abnormal growth of bones on finger joints is called interphalangeal joints.
- B. Cartilage layer causes the bones to damage gradually over time.
- C. Osteoarthritis is not the only cause for Heberden's nodes.

Extract 3

27) You hear a discussion between a nurse and a physician explaining about surgical treatments for patients with a desiccated disc.

The extra bone that has moved out of place is removed in;

- A. Fusion method
- B. Correction method
- C. Decompression method

Extract 4

28) You hear a discussion between a nurse and a physician explaining about outcomes of TB skin test.

Which of the following statements is correct?

- A. Patients vaccinated using the bacillus Calmette-Guérin show a positive result for TB
- B. Patients exposed measles show a false negative result to TB
- C. If the bump is larger than 5 millimeters then the test result is considered negative for TB

Extract 5

29) You hear a discussion between a nurse and a physician explaining about atelectasis.

Which of the following statements suits best with this extract?

- A. Alveoli in the lower lobes of the lungs deflate during bibasilar atelectasis.
- B. Bibasilar atelectasis is a partial collapse of lungs
- C. Deflation of alveoli in the lower lobes of the lungs is called atelectasis.

Extract 6

30) You hear a discussion between a nurse and a physician explaining about liver flukes.

Which of the following statements is incorrect?

- A. It is difficult to diagnose liver flukes as the symptoms are similar to many other conditions.
- B. Liver flukes is the disease caused by fascioliasis.
- C. Pain in upper right abdomen is caused when liver flukes burrow through the lining of the liver.

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the lecture given by a physician on the topic Cystic hygromas

You have 90 seconds to read questions 31 to 36

31) Which of the following statements is incorrect?

- A. Cystic hygroma in embryo can result in miscarriage
- B. Cystic hygroma that are present at the time of birth are malignant
- C. Blockage in the lymphatic system causes cystic hygroma

32) Which of the following statements is incorrect?

- A. Adult onset cystic hygroma is very rare
- B. 50 percent of the cases of cystic hygroma are due to viral infections to a fetus
- C. Drug and alcohol consumption during pregnancy can also cause cystic hygroma formation

33) Additional set of chromosomes to the fetus are developed when;

- A. The woman misses X chromosome completely or partially
- B. There is a Noonan syndrome
- C. There is a condition of Trisomy 13, 18 or 21

34) Unusual facial feature is formed when;

- A. There is a Noonan syndrome
- B. The woman misses X chromosome completely or partially
- C. There is a condition of Trisomy 13, 18 or 21

35) Which of the following statements is incorrect?

- A. Low levels of alpha-fetoproteins is an indication of cystic hygroma
- B. Usually cystic hygroma is diagnosed during pregnancy.
- C. Blood tests at 15 to 20 weeks of pregnancy can detect cystic hygroma formation

36) Chromosomal abnormalities can be detected through

- A. Transvaginal probe

- B. Amniocentesis
- C. Fast spin magnetic resonance

Extract 2

Questions 37 to 42

You hear the monologue of a physician giving a lecture on delusions of grandeur and its treatments.

You have 90 seconds to read questions 37 to 42

37) A manic episode occurs in patients with

- A. Narcissistic personality disorder
- B. Bipolar disorder
- C. Dementia

38) In which of the following conditions, a person may tend to spend too much of money?

- A. Manic episode
- B. Narcissistic personality disorder
- C. Dementia patients with delusion of grandeur

39) In which of the following disorders, patients lack empathy?

- A. Bipolar disorder
- B. Narcissistic personality disorder
- C. Dementia patients with delusion of grandeur

40) In which of the following conditions, hallucinations does not occur?

- A. Schizophrenia
- B. Brain damage or injury
- C. Dementia patients with delusion of grandeur

41) **Drugs such as lithium is given to the patients with;**

- A. Bipolar disorder
- B. Schizophrenia
- C. Narcissistic personality disorder

42) **A comprehensive, ongoing therapy to offset the effects of delusions is needed to patients with;**

- A. Bipolar disorder
- B. Narcissistic personality disorder
- C. Brain damage or injury

Test No: 18

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Mr. Greg Mathews. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mr. Greg Mathews

Age : 72

Symptoms & disease : fell down from the stairs & unconscious

Patient's description of symptoms: fell down yesterday morning when he was trying to put his boots on top of the staircase. He fell down 20 steps and he has lost his consciousness. He was evaluated by a local clinic and was amnesic at the time of examination. referred by a local clinic upon reviewing a HCT scan report

Past medical history : Atrial fibrillation, (1) with associated left hemiparesis and (2) This was followed by a right coronary artery for 98% stenosis. However, the stroke symptoms & signs were resolved. (3) total replacement of right knee two years ago, venous stasis; with no history of deep vein thrombosis.

Medications : Lasix 40 mg once in a day, (4) Lanoxin 0.125mg once daily, Capoten 2.5mg twice a day, (5) thrice a day, ASA 325 mg once in a day, (6) twice a day.

Family history of illness : father expired of an (7) at 70, his mother died of complications of a dental procedure.

Diagnosis : Physical examination - blood pressure 157/86, (8) respiratory rate (9) Reflexes are symmetric. (10) bilaterally. His cardiovascular regular rate and rhythm without murmur. HEENT shows abrasion over the right forehead.

Extremity: distal right leg edema and erythema just above the ankle.

Impression : previous HCT scan reveals a (11) Right lower extremity revealed a fracture of the (12) for which he was casted.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mr. James Williams. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : James Williams

Age : 58

Symptoms & disease : septic shock and elevated cardiac enzyme profile

Patient's description of symptoms: had a septic shock and when we consulted locally, the diagnosis revealed elevated cardiac enzyme profile. He had some workup done from cardiac standpoint which has been negative so far. no history of chest pain, shortness of breath, hypertension or diabetes mellitus Past medical history : had pulmonary fibrosis and he is on prednisone, (13) status post foot surgery with infection recuperating from the same, respiratory acidosis, septicemia and septic shock, (14) No prior cardiac history. Elevated cardiac enzyme profile.

Medications : Vitamin supplementation, Prednisone, (15) Losartan 50 mg daily, (16) Lasix, Potassium supplementation

Allergies : Sulfa

Diagnosis : physical examination reports show Pulse rate of 94, blood pressure 98/57, respiratory rate as normal. Air entry bilaterally clear, (17) point of maximal impulse displaced.

S1, S2 regular. (18) chronic skin changes, markings in the lower extremities. Pulses are palpable. laboratory reports show echocardiogram is normal sinus rhythm with wide complex.

White blood count of 20,000, (19) platelets of 163, international normalised ratio 1.36, BUN of 158, creatinine 8.7, potassium 7.3, of bicarbonate is 11.

Cardiac enzyme profile, (20)

21) myoglobin 1423. Chest x-ray, no acute changes.

Impression : pulmonary fibrosis and is on prednisone, Septicemia, septic shock secondary to cellulitis of the leg. Acute renal shutdown. Elevated cardiac enzyme profile without prior cardiac history possibly due to sepsis and also (22)

Further diagnosis : an echocardiogram to assess (23) to rule out any cardiac valvular involvement. patient requires aggressive medical management including dialysis.

From cardiac standpoint, (24) at this juncture. His cardiac enzyme profile could be elevated secondary to sepsis and also underlying renal failure.

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a doctor and nurse about Spastic cerebral palsy and its classifications.

In which type of spastic cerebral palsy, the patients will have a scissors gait?

- A. Spastic tetraplegia
- B. Spastic diplegia
- C. Spastic hemiplegia

ANSWER:

Extract 2

26) You hear a discussion between a doctor and nurse about different dose-rates of brachytherapy.

Which one of the following radiation therapies involve the use of remote afterloading machine?

- A. Low-rate brachytherapy
- B. Pulsed dose-rate brachytherapy
- C. High dose-rate brachytherapy

ANSWER:

Extract 3

27) You hear a discussion between a doctor and nurse about bariatric surgery.

Which one of the the following surgeries involves rerouting of the small intestines to prevent food absorption?

- A. Roux-en-Y Gastric Bypass
- B. Biliopancreatic Diversion with a Duodenal Switch
- C. Adjustable Gastric Banding

ANSWER:

Extract 4

28) You hear a discussion between a doctor and nurse about oral lichen planus lesions.

Irregular painful ulcers covered by a yellowish pseudomembrane of fibrin is a characteristic of;

- A. Bullous type
- B. Erosive type
- C. Reticular type

ANSWER:

Extract 5

29) You hear a discussion between a doctor and nurse about the autoimmune diseases that affect the blood and blood vessels.

The autoimmune disease that damages the platelets is;

- A. Idiopathic thrombocytopenic purpura
- B. Polyarteritis nodosa
- C. Antiphospholipid antibody syndrome

ANSWER:

Extract 6

30) You hear a discussion between a doctor and nurse about different types of biosensing elements.

Which one of the following biosensing elements is sensitive to changes in potential hydrogen?

- A. Antibodies
- B. Enzyme

C. Microorganisms

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the discussion between a senior doctor and junior doctors about bone marrow transplant procedures.

You have 90 seconds to read questions 31 to 36

31) Which of the following give rise to blood cells?

- A. Peripheral blood stem cells
- B. Hematopoietic stem cells
- C. Bone marrow cells

ANSWER:

32) Which of the following is not a source of stem cells for bone marrow transplant?

- A. Hematopoietic stem
- B. Peripheral blood
- C. Bone marrow

ANSWER:

33) Stem cells are harvested, from either bone marrow or blood and then frozen in;

- A. Cord blood transplant
- B. Allogeneic bone marrow transplant
- C. Autologous bone marrow transplant

ANSWER:

34) Which of the following does not involve a donor?

- A. Synergic bone marrow transplant
- B. Allogeneic bone marrow transplant
- C. Autologous bone marrow transplant

ANSWER:

35) Which one of the following bone marrow procedures has the risk of graft rejection?

- A. Autologous bone marrow transplant
- B. Allogeneic bone marrow transplant
- C. Syngeneic bone marrow transplant

ANSWER:

36) The factor called human leukocyte antigen system is used in;

- A. Allogeneic bone marrow transplant

- B. Autologous bone marrow transplant
- C. Cord blood transplant

ANSWER:

Extract 2

Questions 37 to 42

You hear the discussion of a physician with junior doctors on Bone Cancer.

You have 90 seconds to read questions 37 to 42

37) Which of the following statement is correct?

- A. Sarcoma may involve bone fractures
- B. Li-Fraumeni syndrome is a type of sarcoma
- C. Most of the patients with Paget's disease may develop bone cancer

ANSWER:

38) Which of the following statement is correct?

- A. Osteoblasts dissolve the particles of bone and cause resorption.
- B. Osteoclasts form the bone by laying down bone material.
- C. Chondrocytes make the cartilage.

ANSWER:

39) Which of the cancer cells look like early forms of bone cells that makes new bone tissue?

- A. Spindle cell sarcoma
- B. Ewing's sarcoma
- C. Osteosarcoma

ANSWER:

40) The bone cancer that can grow in cartilage or the nerves is?

- A. Ewing's sarcoma
- B. Osteogenic sarcoma
- C. Spindle cell sarcoma

ANSWER:

41) Which of the following is a connective tissue tumor?

- A. Ewing's sarcoma
- B. Spindle cell sarcoma
- C. Chondrosarcoma

ANSWER:

42) The bone cancer that can form in scapula is;

- A. Chondrosarcoma
- B. Spindle cell sarcoma
- C. Ewing's sarcoma

ANSWER:

Test No: 19

Part A

In this part of the test, you will hear two different extracts. In each extract, a health professional is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Mrs. Melissa. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mrs. Melissa:

Age : 48

Symptoms & disease : sudden onset of pain on left hip

Patient's description of symptoms: got a sudden onset of pain on left hip when lifting

a (1)

: constant pain and worsens while sitting, twisting, lifting or riding in a car

: pain improves after resting

: depressed, lost interest in all activities, gets insomnia, (2)

: fatigue and (3)

: had flu vaccine two years ago & (4) five years ago

: not attending work

: stopped smoking but drinks socially

Family history of illness : father had a (5) and hypertension. Mother had a (6) and died at the age of 70.

Medical history : had an (7) seven years back and a (8) three years back

Diagnosis : MRI shows small central herniated nucleus pulposus at L4/5. Bulge at L3/4. there is a (9) Herniated nucleus pulposus at L5/S1. There is an entrapment of the Superior Gluteal Nerve in the aponeurosis of the Gluteus Medius-Left. depression and sleep disorder.

Further treatment : Baclofen 10 mg before bedtime, (10) twice a day, hydrochlorothiazide 25 mg once in a day and (11) before bedtime.

Further diagnosis : to order for a diagnostic or (12) depending on patient's condition after three weeks,

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Rasputin. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Rasputin

Age : 36

Symptoms & disease : pricked index finger with needle contaminated with Hepatitis C

Patient's description of symptoms: working as a (13) & respiratory therapist

: when attempting to do a (14) had his left index finger pricked with

: needle contaminated with Hepatitis C

Diagnosis : found to be a carrier for Hepatitis C

: had periodic (15)

: had (16) for Hepatitis C and had (17) showing protected antibodies

: had tetanus

Medical history : had (18) disease in the back

Medications : Nexium

Allergies : (19)

Physical examination : temperature is 97.2 degrees, (20) respirations 14 and unlabored

: (21) negative for HIV

: no other symptoms suggesting (22)

: liver function is normal. No signs of infection

Impression : developed (23) due to (24)

: secondary to contaminated needlestick

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at question 25

Extract 1

25) You hear a monologue by a physician explaining to his staff about Cutaneous manifestations.

Which of the following is a cutaneous sign of vomiting?

- A. Telogen effluvium
- B. Knuckle calluses
- C. Xerosis

ANSWER:

26) You hear a monologue by a physician explaining to his staff about symptoms of anorexia nervosa.

Which of the following statements is incorrect?

- A. Mitral valve prolapse can cause chest pain.
- B. Abnormal ejection fraction was seen in most patients with anorexia nervosa
- C. Long standing hypovolemia causes chest palpitations

ANSWER:

27) You hear a discussion between a physician and his nurse about endometriosis

Endometriosis is;

- A. Endometrial tissue formed inside the uterine cavity
- B. Broken endometrial tissue
- C. Displaced endometrial tissue

ANSWER:

28) You hear a discussion between a physician and his nurse about the treatments for the signs of eating disorders.

Topical tocopherol is effective in the treatment of

- A. Xerosis
- B. Acne
- C. Angular stomatitis

ANSWER:

29) You hear a discussion between a physician and his junior about pain transmission.

Non-nociceptive signals are carried by the;

- A. Large nerve fibers
- B. Small nerve fibers
- C. Projection neuron

ANSWER:

30) You hear a discussion between a physician his nurse about subclinical seizures.

Which of the following statements is incorrect?

- A. Unusual electrical activity in the brain causes a subclinical seizure.
- B. Electroencephalogram is a treatment method for autism.
- C. Signs such as aggression or meltdowns were seen in the autistic patient.

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1

Questions 31 to 36

You hear the doctor briefing to his staff about Guidelines for the Early Detection of Cancer.

You have 90 seconds to read questions 31 to 36

31) Colon and rectal cancer screening is suggested to;

- A. The people up to the age of 75, if maintaining good health.
- B. The people up to the age of 85, if maintaining good health.
- C. People above 85, if maintaining good health.

ANSWER:

32) Pap screening is suggested once in every 3 years for the age group;

- A. 30 to 65
- B. 21 to 29
- C. Above 65

ANSWER:

33) A Pap test in addition to HPV test is recommended for;

- A. The women above 65 years
- B. The women between 30 and 65
- C. The women who had a total hysterectomy

ANSWER:

34) Mammograms once every two years is recommended for the age group;

- A. 40 to 44
- B. Above 55
- C. 45 to 54

ANSWER:

35) For yearly screening of lung cancer, the person

- A. Should not have smoked 30 pack per year for 15 years
- B. Should have a smoking history of a maximum of 30 pack per year
- C. Should have a smoking history of a minimum of 30 pack per year

ANSWER:

36) Which of the following statements is incorrect;

- A. Research hasn't proven yet that the risk factors outweigh the benefits of screening
- B. One should get a prostate specific antigen blood test prior to the screening
- C. Men should not get screened for prostate cancer without knowing the risk factors

ANSWER:

Extract 2**Questions 37 to 42**

You hear the doctor giving a lecture on the effect of disrupting gut-brain communication.

You have 90 seconds to read questions 37 to 42

37) Which of the following statements is incorrect?

- A. Gut-brain communication will decrease memory and learning abilities.
- B. Gut has a strong communication with brain
- C. Gut is considered as the second brain

ANSWER:

38) A long nerve called vagus nerve

- A. Lies inside the gastrointestinal tract.
- B. Lies inside the brain
- C. Controls our digestive system

ANSWER:

39) Feeding behavior is initiated by;

- A. The signals from the gastrointestinal tract.
- B. hippocampal activity
- C. vagal nerve stimulation

ANSWER:

40) Signals to stop eating is transmitted from

- A. Brain to gut
- B. Gut to brain
- C. From hippocampus to gastrointestinal tract

ANSWER:

41) When the gut-brain pathway was detached;

- A. The rats could effectively access spatial memories provoked by the gastrointestinal system
- B. The rats could still access the food with their spatial memory
- C. The rats could access the food with the help of activated vagus nerve

ANSWER:

42) What is the conclusion of this research?

- A. Disruption of the vagal nerve does not affect social learning, body weight or anxiety.
- B. Endogenous connection from gut to the hippocampus mediates the cognitive pathway.
- C. vBLOC therapy, has been effective in weight loss by electrically disrupting the vagus nerve.

ANSWER:

Test No: 20

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is taking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Polina Semyonovna Zhemchuzhina. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Polina Semyonovna Zhemchuzhina

Age : 57

Symptoms & disease : single episode of decreased eye vision

Patient's description of symptoms: have a history of (1) and had a (2) since last one month she had a sing episode of decreased eye vision The problem lasted for about five minutes that occured four weeks ago when while driving the car. During that time she felt (3) Subsequent CT scan, (4) echocardiogram, and neurological evaluation, all were unremarkable. she couldn't have an MRI due to the pacemaker placement. no lesions or any change in vision, headaches, change in gait or other neurological issues. Drinks socially, doesn't smoke.

Medications : Plavix, baby aspirin 81 mg per day, (5) daily and (6) daily.

Physical Examination : blood pressure 134/80, heart rate 60, (7) and weight is 244 pounds.

Diagnosis : Cranial nerves (8) has normal bulk and tone throughout. There is no cogwheeling. There is some minimal weakness at the (9) 4+ or 5 and possibly trace weakness at the quadriceps -5 or 5. has decreased sensation to (10) only, otherwise sensory is intact to light touch, and temperature, pinprick, proprioception and vibration. There is no dysmetria or tremor noted. Romberg is negative.

Impression : (11) his brief episode of visual loss is concerning for compromise of the posterior circulation. Differential diagnoses include hypoperfusion, stenosis, and dissection.

Has (12) The symptoms are very mild and consist mainly of some mild proximal upper extremity weakness and very mild gait instability.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Mrs. Emmeline Pethick. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Mrs. Emmeline Pethick

Age : 40

Symptoms & disease : acute onset of headaches

Patient's description of symptoms: has (13) set at 90 m.m.H.2.O. Recently getting acute onset of headaches and is worsening day by day. patient couldn't sleep. pain is constant worsens with (14) as well as on standing up. she took Imitrex and (15) but didn't have much relief pain quite intense in the (16) gets a (17) experienced (18) and dimming lights

Physical Examination : blood pressure 153/86, pulse 63, and respiratory rate 16. Cranial nerves Intact for (19) shut site is clean, dry, and intact. There is a small 3 mm to 4 mm round scab (20) there is a (21) there.

Impression : worsening headaches are secondary to (22) (23) and migraine headaches

Further diagnosis : to have another (24) to confirm the shunt back program to 90 mmH2O.

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

25) You hear a discussion between a doctor and nurse about different complications, following heart attack.

What happens when a cardiogenic shock occurs following heart attack?

- A. Heart beats irregularly.
- B. Blood pressure drops suddenly.
- C. Oxygen levels in the blood become too low.

ANSWER:

Extract 2

26) You hear the discussion between two doctors about the impacts of acute kidney injury.

Urine output of less than 0.5 milliliter per kilogram per hour for 14 hours indicates;

- A. Stage 1 of acute kidney injury
- B. Stage 3 of acute kidney injury
- C. Stage 2 of acute kidney injury

ANSWER:

Extract 3

27) You hear a discussion between two doctors about acquired melanocytic nevi.

Pseudohorn cysts may be seen in;

- A. Dermal Nevi
- B. Junctional Nevi
- C. Compound Nevi

ANSWER:

Extract 4

28) You hear a discussion between a doctor and nurse about amblyopia.

In which of the following conditions one eye has a refractive error?

- A. Anisometropic amblyopia
- B. Occlusion amblyopia
- C. Strabismic amblyopia

ANSWER:

Extract 5

29) You hear a discussion between a doctor and nurse about miliaria.

The condition called sudamina occurs;

- A. When sweat moves from the ducts into the dermis.
- B. During sweat duct obstruction in the uppermost epidermis.
- C. During retention of sweat that moves into the middle layers of the epidermis and the upper dermis.

ANSWER:

Extract 6

30) You hear a discussion between a doctor and nurse about different types of stents.

Which of the following stents is used to keep blood vessels outside the coronary arteries open?

- A. Stent grafts
- B. Coronary stent
- C. Peripheral vascular stent

ANSWER:

Part C

In this part of the test, you'll hear two different extracts. In each extract, you'll hear health professionals talking about specific aspects of their work.

For questions, 31 to 42 choose the answer (A, B, or C) which fits best according to what you hear. Complete the answers as you listen the audio.

Now, look at extract one.

Extract 1 Questions 31 to 36

You hear the discussion between a senior doctor and junior doctors on epidermal nevi.

You have 90 seconds to read questions 31 to 36

31) What is always localized?

- A. Nevus unius lateris
- B. Ichthyosis hystrix
- C. Nevus verrucosus

ANSWER:

32) Which of these follow the lines of Blaschko?

A. Keratinocytic epidermal nevus

B. Nevus sebaceous

C. Nevus comedonicus

ANSWER:

33) Which can form blackheads?

A. Keratinocytic epidermal

B. Nevus comedonicus

C. Becker nevus

ANSWER:

34) Which of these is androgen--dependent?

A. Becker nevus

B. Nevus comedonicus

C. Inflammatory linear verrucous epidermal nevus

ANSWER:

35) Which one of these is not associated with brain?

A. Nevus comedonicus

B. Angora hair nevus

C. Becker nevus

ANSWER:

36) The epidermal nevi that form plaques is;

A. Porokeratotic eccrine nevus

B. Inflammatory linear verrucous epidermal nevus

C. Acantholytic epidermal nevus

ANSWER:

Extract 2

Questions 37 to 42

You hear the discussion of a physician with junior doctors on different types of gangrene.

You have 90 seconds to read questions 37 to 42

37) Which of the following conditions damages small arteries and blood vessels?

A. Peripheral arterial disease

B. Dyslipidemia

C. Diabetes

ANSWER:

38) Which of the following diseases develop fatty acid deposits?

A. Peripheral arterial disease

B. Diabetes

C. High cholesterol

ANSWER:

39) The disease caused by the bacteria called Clostridium is;

A. Peripheral arterial disease

B. Necrotising fasciitis

C. Gas gangrene

ANSWER:

40) Staphylococcus bacteria causes;

- A. Necrotising fasciitis
- B. Internal Gangrene
- C. Gas gangrene

ANSWER:

41) Which of the following bacteria is also known as 'flesh eating bacteria'

- A. Clostridium
- B. Necrotising fasciitis
- C. C. perfringens

ANSWER:

42) Which of the following conditions can be caused by alcohol misuse?

- A. Cancrum oris
- B. Meleney's synergistic gangrene
- C. Fournier's gangrene

ANSWER:

Test No: 31

Part A

In this part of the test, you hear two different extracts. In each extract, a health professional is talking to his patient. For questions 1 to 24 complete the notes with the information you hear.

Now, look at the notes for extract 1.

Extract 1: Questions 1 to 12

You hear a doctor talking to a patient called Rongomai Whenua. For questions 1 to 12, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Rongomai Whenua

Age : 44

Symptoms & disease : chronic headaches and pulsatile tinnitus

Patient's description of symptoms: has chronic headaches and pulsatile tinnitus past three months gets pulsations in the head (1) paining on the top of head gets (2) while speaking on the phone no nausea or vomiting. No past history of headaches prior to three months. had dizzy episodes in the past with nausea, being imbalanced at times. smokes 1 pack a day, doesn't drink

Previous illness : had skin cancer on arm and back. a kidney donor, had a (3) C-sections, (4) laparoscopy, and temporal arteritis.

Medications : Tylenol, (5) and multivitamin and probiotic

Allergies : (6)

Family history of illness : father has a cancer hypertension and heart disease

Physical Examination : Blood pressure 120/78, pulse 64 and regular, and the temperature is 97.4.

Diagnosis : Cardiovascular test shows regular heart rate and rhythm without murmur. There is an old (7) Weber exam is midline. Grossly hearing is intact.

Impression : pulsatile tinnitus, left ear with (8) as the etiology. There is also a possibility of (9) (10) Dizziness, probably due to possible Meniere disease.

Further treatment : to start a two gram less sodium diet. carotid ultrasound study as part of the workup and evaluation. (11) one spray each nostril daily. to use the hearing protection devices at all times. to recheck in three weeks. If the pulsatile tinnitus does not improve then (12) is recommended. to undergo for an audio and tympanogram prior to the treatment procedure.

Extract 2: Questions 13 to 24

You hear a physician talking to a patient called Sampaguita. For questions 13 to 24, complete the following notes with a word or short phrase.

You now have thirty seconds to look at the notes.

Patient : Sampaguita

Age : 21

Symptoms & disease : itchy, red rash on feet

Patient's description of symptoms: itchy, red rash on feet, tingling persistently, for the past four weeks Right great toe, right 2nd toe, right 3rd toe and right 4th toe. onset of itching starts (13)

: doesn't smoke. Drinks regularly. Past medical history : chickenpox and (14)

Past surgeries : has (15)

Medications : none

Allergies : gets severe rash when (16)

Family history of illness : paternal grandmother has cataract and (17)

Diagnosis : physical examination reports show blood pressure 110/64 respiratory rate is 18 heart rate is 66 & temperature is 98.6. Lower extremities is warm to cool, proximal to distal.

The (18) pulse palpable bilateral. (19) palpable bilateral. No edema observed. (20) are not observed. Right great toe, right 2nd toe, right 3rd toe and right 4th toenail shows (21) (22) for all groups tested. Muscle tone is normal. Inspection and palpation of bones, joints and muscles is unremarkable.

Impression : Tinea Pedis. (23)

Further treatment : Lotrimin AF 1% cream to apply four times a day and (24) once in eight hours for four weeks

That is the end of Part A

Now look at Part B

Part B

In this part of the test, you will hear six different extracts. In each extract, you'll hear people talking in a different healthcare environment.

For questions, 25 to 30 choose the answer (A, B, or C) which fits best according to what you hear. You will have time to read each question before you listen to the audio. Complete the answers as you listen the audio.

Now look at the question 25

Extract 1

(25) You hear a discussion between a doctor and nurse about different types of different types of kidney cancers.

Which of the following kidney cancers does not metastasize to other parts?

- A. Renal cell carcinoma
- B. Kidney sarcoma
- C. Carcinosarcoma

ANSWER:

Extract 2

(26) You hear the discussion between two doctors about types of perforations during endoscopic retrograde cholangiopancreatography.

Injury to the pancreatic duct is classified as

- A. Type 3 perforation
- B. Type 4 perforation
- C. Type 2 perforation

ANSWER:

Extract 3

(27) You hear a discussion between two doctors about clinical manifestations of Alpha-1 antitrypsin deficiency.

Which of the following diseases is caused due to abnormal accumulation of alpha-1 antitrypsin within hepatocytes?

- A. Panniculitis
- B. Emphysema
- C. Cirrhosis

ANSWER:

Extract 4

(28) You hear a discussion between a doctor and nurse about autoimmune liver disease.

Which of the following diseases is not associated with autoantibodies in the serum?

- A. Primary biliary cirrhosis
- B. Primary sclerosing cholangitis
